INVESTED IN THE LONG RUN

## Short Duration Securitized Bond Strategy

As of 30 Sep 2022

### Market Commentary

A challenging year for fixed income continued in Q3 as the Bloomberg US Aggregate Bond Index delivered its third consecutive quarter of negative returns, a feat not seen since the nine-month stretch between July 1979 and March 1980. The loss of -4.75% over the past three months ranks as the fourth worst quarter since the index's inception and fits squarely between Q1 2022 (down -5.93%) and Q2 2022 (down -4.69%) in the all-time rankings of worst quarters. Only Q1 1980 (down -8.71%) and Q3 1980 (down -6.56%) are worse than what we've seen so far this year. Considering that Q2 1980 saw a rebound of 18.78% and a calendar year return of 2.71%, markets might be looking back at that volatile period with fondness as 2022 has delivered the worst performance in the history of fixed income markets.

Q3 2022 was a mixed bag of monthly performance, with the index up in July as markets took a step back from the carnage of the first six months of the year before plunging further in August (down -2.83%) and September (-4.32%). The silver lining in these apocalyptic clouds? The steady climb higher in interest rates and spread widening has created ample opportunity for longer-term investors who are able to tolerate significant bouts of volatility.

This seismic shift in interest rates has potentially served as a mini-reset – one that was desperately needed after the 10-year Treasury yield reached its all-time low of 0.51% in early August 2020, following a nearly 40-year bull market. There are no expectations that the market is headed to the highs of the early 1980s (mid-teen yields on the 10-year Treasury), but real yields in positive territory and the 10-year flirting with 4% present a compelling opportunity.

Since the turn of the century, the question was always how rising rates would unfold: slowly, and thus limiting the sticker shock on fixed income portfolios; or quickly, causing pain across financial markets as the world adjusted to the new rate outlook. These past three quarters have given us our answer but also provided us with opportunity.

Despite recent jawboning from talking heads in the financial markets, the prospect of a pivot from the Federal Reserve is just that, talk. Determined to hold on to its inflation-fighting credentials, the Fed raised rates by 75 bps at both meetings this past quarter and reinforced its outlook rather tersely at the Jackson Hole Economic Summit in August. While referencing the more recent drop in inflation (from 9.1% in June to a still white-hot 8.5% in July), Powell clearly stated that, while welcome, the drop was not enough to waylay the Fed's plans for additional rate hikes.

With the labor market appearing to maintain its strength (3.7% unemployment for August with 315k jobs added), the Fed is laser focused on battling inflation and the effort to reach a more normalized level. Powell didn't mince words when it came to potential economic fallout of a hawkish Fed, "While higher interest rates, slower growth, and softer labor market conditions will bring down inflation, they will also bring some pain to households and businesses. These are the unfortunate costs of reducing inflation. But a failure to restore price stability would mean far greater pain." Any thought of a 50-bps pivot in September were washed away after those comments. And while there is no meeting in October, various Fed members have been hitting the financial broadcasts, reiterating the need for an additional 75-bps hike in early November. Barring a substantial drop in inflation in upcoming economic reports or a significant disruption to the labor market – both of which are unlikely in the short term – the market shouldn't doubt the Fed's commitment to continue its current path.

### **Portfolio Performance & Positioning**

It is important to note our portfolio works to provide yield for investors while focusing on the shorter end of fixed income markets. We believe there are opportunities to add incremental yield over the benchmark by investing in structured products across the quality spectrum. The portfolio strives to maintain an average credit quality rating of A/BBB while taking advantage of mispriced opportunities in unrated securities and an allocation to below investment grade securities.

As of September 30, the portfolio had a yield-to-worst (YTW) of 7.80% with an effective duration of 1.39 years, compared to a YTW of 5.93% and effective duration of 1.36 years at the end of the previous quarter. The increase in yield can be attributed to the increase in yields along the shorter end of the yield curve as well as the impact of spread widening through the quarter. It should be noted that the impact of rising rates for any product with duration will result in negative performance, thus the overall negative performance during the third quarter.

The securitized sector remains the largest allocation in the portfolio and contributed positively to relative performance despite the overall negative performance. The securitized market held up much better than the corporate and Treasury markets over the past three months. Security selection within the corporate allocation helped mitigate the relative impact to the benchmark, despite the overall negative performance in the sector. The Treasury allocation in the portfolio performed slightly worse than the benchmark allocation, but our significant underweight in Treasury securities in favor of the securitized sector was additive to performance.

Within the securitized sector, non-agency commercial mortgage-backed securities rebounded from a rough second quarter while small business asset-backed securities (ABS) and credit card ABS held up the best compared to other areas of the sector. Non-agency residential mortgage-backed securities dealt with a challenging quarter as this sector continues to feel the impact of rising rates.

We continue to search for opportunities in the marketplace while maintaining an attractive yield relative to the benchmark.

Diamond Hill Capital Management, Inc. (DHCM) is a registered investment adviser and wholly owned subsidiary of Diamond Hill Investment Group, Inc.; registration does not imply a certain level of skill or training. Diamond Hill provides investment management services to individuals and institutional investors through mutual funds and separate accounts. DHCM claims compliance with the Global Investment Performance Standards (GIPS®). The Short Duration Securitized Bond Composite is comprised of all discretionary, non-fee and fee-paying, non-wrap accounts managed according to the firm's Short Duration Securitized Bond strategy, including those clients no longer with the firm. The strategy's investment objective is to maximize total return consistent with the preservation of capital by investing in high, medium and low-grade fixed income securities. The Short Duration Securitized Bond strategy generally invests at least 80% of its assets in a diversified portfolio of investment grade, fixed income securities and may invest a significant portion or all of its assets in asset-backed, mortgage-related and mortgage-backed securities. The portfolio may invest up to 15% of its assets in below-investment grade securities at the time of purchase and will typically maintain an average portfolio duration of less than three.
