Market review and outlook

The Bloomberg US Intermediate Aggregate Bond Index returned 1.35% during Q4, bringing year-to-date performance for the index to 7.45%, the best annual performance since 2002. After lowering the Fed funds rate by 100 basis points (bps) in 2024 and an additional 75 bps in 2025, market expectations are for the Federal Reserve to remain on hold for the foreseeable future. The one caveat to this outlook: changes at the Federal Reserve, including the unresolved court case for Lisa Cook, the pending departure of Jerome Powell, and potential dovish appointments from the current administration. While the labor market has shown signs of weakness – the unemployment rate averaged 4.2% in 2025 and rates for recent months have been trending higher – the current rate is significantly lower than the 40-year average of 5.7%. From an inflation standpoint, the recent lowering trend bodes well for the consumer, as Core CPI dipped to 2.6% in the most recent data, following a period of holding at or slightly above 3% in prior months.

Updates by sector

Treasury

The yield curve extended its year-long steepening trend into Q4. The 30-year Treasury yield rose 11.3 bps in Q4 on uncertainty around the future path of inflation, ending the year at 4.84%, while the two-year Treasury yield fell 13.5 bps to 3.47%. The market moved ahead of the Fed early in the year, pushing the two-year yield lower before the Federal Reserve followed. By year end, however, expectations and policy had converged: the Fed cut the federal funds rate by 75 bps over the final four months of the year and the two-year Treasury yield declined nearly 77 bps in 2025. Within the intermediate segment of the Treasury curve, the 5-year Treasury yield decreased by 1.6 bps in Q4 and 65.7 bps in 2025.

Corporate

The investment-grade corporate market, as measured by the Bloomberg US Intermediate Corporate Bond Index, struggled in Q4, posting the lowest quarterly return of 2025 (+1.29%) and the weakest result since Q4 2024 (-1.40%). Spreads reversed course and widened nearly 4 bps during the quarter, rising from 66.1 bps to 69.5 bps. After bottoming in late Q3 at 64.5 bps,

spreads widened to as much as 76.8 bps in late November amid heightened economic uncertainty before tightening into year end.

Securitized

Spreads in securitized credit followed a similar trajectory to other asset classes – tightening from 2024 until volatility around Liberation Day, then resuming their grind tighter into year end. The notable exception was auto asset-backed securities (ABS), where spreads remained modestly wider year over year, in part due to disruption from the Tricolor bankruptcy. Even with broad-based spread compression, the higher-yielding, better-structured parts of securitized credit continued to offer more compelling relative value for managers willing to do the work on structure and collateral. Issuance closed the year on a strong note, with the best December in several years and record full-year 2025 volume.

Q4 performance review

Key contributors

- Strong performance in the portfolio's agency collateralized mortgage obligations (CMOs) allocation helped offset some of the negative impact from the agency passthrough allocation.
- Non-agency residential mortgage-backed securities (RMBS) in the portfolio generated strong performance in Q4, ahead of both benchmark and overall strategy performance.
- Strong performance in the underlying sectors within non-agency commercial mortgage-backed securities (CMBS) – namely, commercial real estate collateralized loan obligations (CRE CLOs), hospitality and multifamily – contributed to relative performance.

Key detractors

- Despite stronger performance from the portfolio's Treasury allocation compared to the benchmark, the significant underweight detracted from relative performance.

- A slight underperformance in the portfolio's allocation to agency passthrough mortgages was amplified by a significant underweight relative to the benchmark.
- The portfolio's exposure to subprime auto ABS detracted from performance, as the market continued to deal with the fallout from the Tricolor bankruptcy in Q3.

2025 performance review

Key contributors

- Non-agency RMBS and non-agency CMBS saw strong performance relative to the benchmark.
- The stability of the portfolio's structured CMOs over plain vanilla passthroughs during a rather chaotic interest rate environment in 2025 contributed to relative performance.
- Within the overall ABS sector, unsecured consumer contributed the most to relative performance.

Key detractors

- Despite stronger performance from the portfolio's Treasury allocation compared to the benchmark, the significant underweight detracted from relative performance in 2025.
- Non-corporate credit contributed meaningfully to benchmark performance but was not held in the portfolio; however, the benchmark's limited exposure to the sector muted the overall impact.
- Despite strong security selection in the corporate sector, the portfolio's underweight relative to the benchmark detracted from performance.

Bonds rated AAA, AA, A and BBB are considered investment grade.

Diamond Hill Capital Management, Inc. (DHCM) is an investment adviser registered with the Securities and Exchange Commission and a wholly owned subsidiary of Diamond Hill Investment Group, Inc.; registration does not imply a certain level of skill or training. DHCM provides investment management services to individuals and institutions through mutual funds, separately managed accounts, collective investment trusts, a private fund, a closed-end interval fund and other pooled vehicles including subadvised funds and model delivery programs. Policies for valuing investments, calculating performance and preparing GIPS reports, as well as a complete list and description of all composites, are available upon request. To receive a complete list and description of all Diamond Hill composites and/or a GIPS® report, contact Scott Stapleton at 614.255.3329, sstapleton@diamond-hill.com or 325 John H. McConnell Blvd., Suite 200, Columbus, OH 43215. A list of broad distribution pooled funds is available upon request. In addition, a list of limited distribution pooled fund descriptions is available upon request. The Intermediate Bond Composite is comprised of discretionary, fee-paying, non-wrap accounts managed according to the firm's Intermediate Bond fixed income strategy. The strategy's investment objective is to maximize total return consistent with the preservation of capital. The strategy typically invests in a diversified portfolio of investment grade, intermediate, fixed income securities, including bonds, debt securities and other similar US dollar-denominated instruments issued by various US public- or private-sector entities, by non-US corporations or US affiliates of non-US corporations or by non-US governments or their agencies and instrumentalities. The portfolio may invest a significant portion of its assets in asset-backed, mortgage-related and mortgage-backed securities at the discretion of Diamond Hill Capital Management, Inc. (the "Adviser"). The portfolio will typically maintain an average portfolio duration within 20% of the Bloomberg Intermediate US Aggregate Bond Index duration. As of 30 September 2024, there is no minimum account size. Prior to this date, the minimum account size was \$50 million. The composite results reflect the reinvestment of dividends, capital gains and other earnings when appropriate. Composite returns and benchmark returns are presented gross of withholding taxes on dividends, interest income and capital gains. Returns are calculated using US Dollars. Net returns are calculated by reducing the gross returns by the highest stated fee in the composite fee schedule. Only transaction costs are deducted from gross of fees returns. Prior to 30 September 2022, actual fees were used in calculating net returns. All net returns were changed retroactively to reflect the highest fee in the composite fee schedule. The Bloomberg US Intermediate Aggregate Bond Index is the benchmark. The index measures the performance of investment grade, fixed-rate taxable bond market and includes government and corporate bonds, agency mortgage-backed, asset-backed and commercial mortgage-backed securities (agency and non-agency) with a maturity greater than 1 year and less than 10 years. The index is unmanaged, includes net reinvested dividends, does not reflect fees or expenses (which would lower the return) and is not available for direct investment.
