Risk Disclosure: The value of fixed-income securities varies inversely with interest rates; as interest rates rise, the market value of fixed-income securities will decline. Lower quality debt (ie: "High Yield") securities involve greater risk of default or price changes due to potential changes in the issuer's credit quality. The value of investments in mortgage-related and asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. The securities may decline in value, face valuation difficulties, become more volatile and/or become illiquid. They are also subject to prepayment risk, which occurs when mortgage holders refinance or otherwise repay their loans sooner than expected, creating an early return of principal to holders of the loans.
