Class I: DHLTX

Class Y: DHTYX

Philosophy and Process Highlights

Under our intrinsic value philosophy, we:

- Treat every investment as a partial ownership interest in that company
- Seek to invest at a discount to intrinsic value
- Possess a long-term investment temperament
- Recognize that market price and intrinsic value tend to converge over a reasonable period of time

Portfolio Guidelines

- Typically 30–40 positions
- Maximum position size is 10%
- Top 10 holdings are typically greater than 40% of net assets
- Maximum industry exposure is 25%
- Maximum sector exposure is 35%

Market Capitalization

The portfolio typically invests in companies with a market capitalization of \$500 million or greater.

Past performance is not indicative of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance quoted. For current to most recent month-end performance, visit diamond-hill.com. Performance assumes reinvestment of all distributions. Returns for periods less than one year are not annualized. Class Y shares include Investor share performance achieved prior to the creation of Class Y shares. These total return figures may reflect the waiver of a portion of a Fund's advisory or administrative fees for certain periods. Without such waiver of fees, the total returns would have been lower.

Risk disclosure: Because the portfolio holds a limited number of securities, a decline in the value of these investments may affect overall performance to a greater degree than a less concentrated portfolio. Small- and mid-capitalization issues tend to be more volatile and less liquid than large-capitalization issues. Fund holdings, sector allocations and portfolio statistics subject to change without notice.

The Russell 3000 Index measures the performance of roughly 3,000 of the largest US companies. The Russell 3000 Value Index measures the performance of the largest US companies with lower price/book ratios and forecasted growth values. The indexes are unmanaged, market capitalization weighted, include net reinvested dividends, do not reflect fees or expenses (which would lower the return) and are not available for direct investment. Index data source: London Stock Exchange Group PLC. See diamond-hill.com/disclosures for a full copy of the disclaimer.

⁶ **Active Share** measures the difference between portfolio holdings and the benchmark. The higher the active share, the greater the risk. Relative to the Russell 3000 Index. **Standard Deviation** measures the volatility of a portfolio's returns. **Beta** measures a portfolio's sensitivity to market movements. **Sharpe Ratio** is the measure of risk-adjusted return of an investment portfolio. **Alpha** is the excess return of an investment relative to the index's return. **R-squared** represents the percentage of a portfolio's movements that can be explained by general market movements. **Up/Down Capture Ratio** is used to evaluate how well a portfolio performed relative to an index during periods when that index has risen/dropped. Statistics for periods less than one year are not annualized.
