DIAMOND HILL

INVESTED IN THE LONG RUN

Team

Chris Welch, CFA
Portfolio Manager

Kristen Sheffield, CFA, CIPM
Portfolio Specialist

Tickers

Investor: DHMAX

Class I: DHMIX

Class Y: DHMYX

Philosophy and Process Highlights

Under our intrinsic value philosophy, we:

- Treat every investment as a partial ownership interest in that company
- Seek to invest at a discount to intrinsic value
- Possess a long-term investment temperament
- Recognize that market price and intrinsic value tend to converge over a reasonable period of time

Portfolio Guidelines

- Typically 50-70 positions
- Maximum position size is 7%
- Top 10 holdings are typically greater than 25% of net assets
- Maximum industry exposure is 20%
- Maximum sector exposure is 30%

Market Capitalization

The portfolio typically invests in companies with a market capitalization between \$500 million and \$10 billion (or, if greater, the maximum market capitalization of companies generally within the capitalization range of the Russell 2500 Index) at the time of purchase.

Top Ten Equity Holdings¹

	Sector	% of Net Assets

Past performance is not indicative of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance quoted. For current to most recent month-end performance, visit diamond-hill.com. Performance assumes reinvestment of all distributions. Returns for periods less than one year are not annualized. Class Y shares include Investor share performance achieved prior to the creation of Class Y shares.

Risk disclosure: Small- and mid-capitalization issues tend to be more volatile and less liquid than large-capitalization issues. Fund holdings, sector allocations and portfolio statistics subject to change without notice.

The Russell 2500 Index measures the performance of roughly 2,500 US small- to mid-cap companies. The Russell 2500 Value Index measures the performance of US small- to mid-cap companies with lower price/book ratios and forecasted growth values. The indexes are unmanaged, market capitalization weighted, include net reinvested dividends, do not reflect fees or expenses (which would lower the return) and are not available for direct investment. Index data source: London Stock Exchange Group PLC. See diamond-hill.com/disclosures for a full copy of the disclaimer.

⁴**Active Share** measures the difference between portfolio holdings and the benchmark. The higher the active share, the greater the risk. Relative to the Russell 2500 Index. **Standard Deviation** measures the volatility of a portfolio's returns. **Beta** measures a portfolio's sensitivity to market movements. **Sharpe Ratio** is the measure of risk-adjusted return of an investment portfolio. **Alpha** is the excess return of an investment relative to the index's return. **R-squared** represents the percentage of a portfolio's movements that can be explained by general market movements. **Up/Down Capture Ratio** is used to evaluate how well a portfolio performed relative to an index during periods when that index has risen/dropped. Statistics for periods less than one year are not annualized.
