High Yield Fund

Our Mission

At Diamond Hill, *we serve* our clients by providing investment strategies that deliver lasting value through a shared commitment to our intrinsic value-based investment philosophy, long-term perspective, disciplined approach and alignment with our clients' interests.

VALUE

We believe market price and intrinsic value are independent in the short-term but tend to converge over time.

LONG-TERM

We maintain a long-term focus both in investment analysis and management of our business.

DISCIPLINE

We invest with discipline to increase potential return and protect capital.

PARTNERSHIP

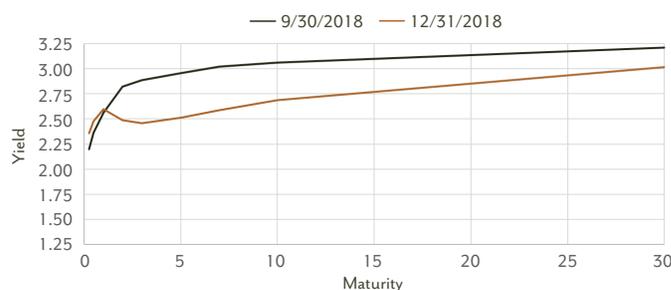

We align our interests with those of our clients through significant personal investment in our strategies.

The Federal Open Market Committee (FOMC) became a major force of market volatility during the fourth quarter, straining a market already under stress due to ongoing trade war rhetoric, a global economic slowdown, and the lead up to the most recent government shutdown. Federal Reserve chairman Jerome Powell started the quarter off on October 3 with comments pertaining to the central bank's positioning, stating that, "We're a long way off from neutral at this point." The Treasury market reaction was swift and pronounced, with the yield on the 10-year jumping 12 bps on the day of the speech, from 3.06% to 3.18%. The yield on the 10-year Treasury continued to climb into early November, peaking at 3.24%, before declining heading into the Thanksgiving holiday week as concerns arose around the viability of a cease-fire in the trade war agreed upon between President Trump and Chinese President Xi Jinping. December delivered one of the most volatile months in recent history for all asset classes, as markets and the Fed diverged in their respective outlooks for future interest rate management by the FOMC. As expected, the FOMC raised the target rate 25 bps to a range of 2.25%–2.50%, but the market was much more focused on the outlook delivered by the Dot Plot to better understand the potential for additional rate hikes in 2019. While there was no change to the economic assessment and minimal changes to language in the official statement, the downshift in the Dot Plot from three hikes in 2019 to two hikes was the major news. This meeting could be construed as dovishly hawkish, meaning that the Fed remains hawkish, projecting two increases in 2019, but by reducing from three increases and indicating a more data-dependent approach, there are dovish overtones. Equity markets reacted poorly to the statement and press conference, with the S&P 500 Index finishing December down over 9%. The 10-year Treasury rallied through the final part of the year, finishing the year at 2.68%. On December 22, the federal government partially shut down and remained so as of the end of the year.

Treasury

Yields in the Treasury market moved dramatically across the curve as the shorter end (one-month to two to three year) moved higher and the longer end (five-year to 30-year) collapsed from a year-long high. The yield curve continued the trend of 2018, as spreads between the two-year and 10-year Treasury yields moved from 24.1

bps at the end of the third quarter to 19.5 bps at the end of the fourth quarter. The spread between the two-year and 10-year Treasury surged past its prior low for the year (18.9 bps on August 24), reaching 10.9 bps on December 19 during Jerome Powell's post-FOMC press conference. The short end of the Treasury curve inverted, as the five-year Treasury yield dropped below both the yield on the two-year and three-year Treasury during the first two and a half weeks of December. The Bloomberg Barclays Treasury Index delivered 2.57% during the quarter, more than enough to offset the 1.67% lost during the first three quarters of 2018.

	3-MO	6-MO	1-YR	2-YR	3-YR	5-YR	7-YR	10-YR	30-YR
9/30/18	2.20	2.36	2.56	2.82	2.88	2.95	3.02	3.06	3.21
12/31/18	2.36	2.48	2.60	2.49	2.46	2.51	2.59	2.68	3.02
Change	0.16	0.11	0.03	-0.33	-0.43	-0.44	-0.43	-0.38	-0.19

Securitized

While the investment grade and high yield markets experienced one of the more difficult quarters in recent memory, the securitized market continued to deliver strong absolute returns. Residential mortgage-backed securities delivered the strongest performance during the quarter, with a 2.08% return, followed by commercial mortgage-backed securities (CMBS) with a 1.72% return, and asset-backed securities (ABS) returning 1.25%. Relative to comparable-duration Treasuries, which delivered strong performance during the quarter, the shorter duration ABS market trailed by 16 bps, RMBS trailed by 53 bps, and CMBS trailed by 112 bps. Within the ABS sector, autos returned 1.12% (-17 bps excess return) and credit cards returned 1.35% (-14 bps excess return).

*Excess return indicates the return over comparable duration Treasuries.

Investment Grade and High Yield Credit

The Bloomberg Barclays U.S. Corporate Index delivered negative quarterly returns for the third time in 2018, with the third quarter representing the only positive quarter. The Index was dragged lower by the industrials sector, which was down 46 bps (-350 bps excess return), while financials (+27 bps, -233 bps excess return), and utilities (+20 bps, -325 bps excess return) helped to offset some of the negative performance. The significant underperformance from an excess return standpoint reflects the strong quarter for Treasuries combined with the dwindling appetite for risk going into year-end. The high yield market, as measured by the ICE BofA ML U.S. High Yield Index, experienced its worst quarter since 2008,

declining 4.67%, pushing the 2018 calendar return into negative territory (-2.26%). Spreads widened dramatically in the final seven weeks of the quarter, beginning on November 8 after Fed Chairman Powell's press conference. During the quarter, spreads for the ICE BofA ML U.S. High Yield Index widened more than 200 basis points, from 328 to 533, while the yield to worst increased from 6.29% to 7.95%, pushing above 8% during December. The CCC segment, which had led the market throughout the first three quarters of the year, lost more than 10% during the quarter and ended the year in negative territory. The BB and B segments of the high yield market were negative during the quarter (down 299 bps and 485 bps, respectively) and also ended the year in negative territory.

Diamond Hill Short Duration Total Return Fund Commentary As of December 31, 2018

All Fund returns based on Class I shares.

The Fund generated a 0.83% total return during the fourth quarter, compared to 1.18% for the Bloomberg Barclays U.S. 1-3 Year Government/Credit Index. Since its inception on July 5, 2016, the Fund has generated a total return of 3.52% compared to 0.80% for the Index. The goal of the Diamond Hill Short Duration Total Return Fund is to outperform the Index over a market cycle, while generating a yield and return advantage relative to the benchmark. We are pleased with how the Fund has performed on a relative basis since inception, despite underperforming during the most recent quarter.

The Federal Open Market Committee (FOMC) became a major force of market volatility during the fourth quarter, straining a market already under stress due to ongoing trade war rhetoric, a global economic slowdown, and the lead up to the most recent government shutdown. Federal Reserve chairman Jerome Powell started the quarter off on October 3 with comments pertaining to the central bank's positioning, stating that, "We're a long way off from neutral at this point." The Treasury market reaction was swift and pronounced, with the yield on the 10-year jumping 12 bps on the day of the speech, from 3.06% to 3.18%. The yield on the 10-year Treasury continued to climb into early November, peaking at 3.24%, before declining heading into the Thanksgiving holiday week as concerns arose around the viability of a cease-fire in the trade war agreed upon between President Trump and Chinese President Xi Jinping. December delivered one of the most volatile months in recent history for all asset classes, as markets and the Fed diverged in their respective outlooks for future interest rate management by the FOMC. As expected, the FOMC raised the target rate 25 bps to a range of 2.25%–2.50%, but the market was much more focused on the outlook delivered by the Dot Plot to better understand the potential for additional rate hikes in 2019. While there was no change to the economic assessment and minimal changes to language in the official statement, the downshift in the Dot Plot from three hikes in 2019 to two hikes was the major news. This meeting could be construed as dovishly hawkish, meaning that the Fed remains hawkish, projecting two increases in 2019, but by reducing from three increases and indicating a more data-dependent approach, there are dovish

overtones. Equity markets reacted poorly to the statement and press conference, with the S&P 500 Index finishing December down over 9%. The 10-year Treasury rallied through the final part of the year, finishing the year at 2.68%. On December 22, the federal government partially shut down and remained so as of the end of the year.

Yields in the Treasury market moved dramatically across the curve as the shorter end (one-month to two to three year) moved higher and the longer end (five-year to 30-year) collapsed from a year-long high. The yield curve continued the trend of 2018, as spreads between the two-year and 10-year Treasury yields moved from 24.1 bps at the end of the third quarter to 19.5 bps at the end of the fourth quarter. The spread between the two-year and 10-year Treasury surged past its prior low for the year (18.9 bps on August 24), reaching 10.9 bps on December 19 during Jerome Powell's post-FOMC press conference. The short end of the Treasury curve inverted, as the five-year Treasury yield dropped below both the yield on the two-year and three-year Treasury during the first two and a half weeks of December.

It is important to note that the Short Duration Total Return Fund works to provide yield for investors while focusing on the shorter end of the fixed income markets. Though there is a concentration on the shorter end of the yield curve, the Fund maintains a certain level of interest rate risk and can experience some price volatility in uncertain markets. We believe there are opportunities to add incremental yield over the benchmark by investing in structured product across the quality spectrum. The Fund strives to maintain an average credit quality rating of A while taking advantage of mispriced opportunities in both unrated securities and a small allocation to below investment grade securities.

Diamond Hill Short Duration Total Return Fund Commentary

As of December 31, 2018

As of December 31, 2018, the Fund had a yield to worst (YTW) of 4.33% with an effective duration of 1.40, compared to the Index's YTW of 2.75% and effective duration of 1.90. Asset-backed securities (ABS) remain the largest allocation in the Fund and was the strongest contributor to the yield advantage of the portfolio over the benchmark.

Within the securitized sector, ABS delivered strong performance led by consumer, equipment and student loans. Residential and Commercial Mortgage-backed securities also contributed to relative performance during the quarter. The Fund's underweight position in the corporate sector relative to the benchmark detracted slightly from performance as the short end of the corporate sector delivered strong returns during the quarter.

Despite an increase in the Fund's Treasury allocation, the underweight relative to the index detracted from relative performance as the Bloomberg Barclays 1-3 Year Treasury Index (a component of the Bloomberg Barclays 1-3 Year Government / Corporate Index) delivered 129 bps of return as rates rallied across the curve.

The Fund continues to search for opportunities in the marketplace while maintaining an attractive yield relative to the benchmark.

Must be preceded or accompanied by a [prospectus](#).

Risk Disclosure: The value of fixed-income securities varies inversely with interest rates; as interest rates rise, the market value of fixed-income securities will decline. Lower quality debt (ie: "High Yield") securities involve greater risk of default or price changes due to potential changes in the issuer's credit quality. The value of investments in mortgage-related and asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. The securities may decline in value, face valuation difficulties, become more volatile and/or become illiquid. They are also subject to prepayment risk, which occurs when mortgage holders refinance or otherwise repay their loans sooner than expected, creating an early return of principal to holders of the loans.

The views expressed are those of the portfolio managers as of December 31, 2018, are subject to change and may differ from the views of other portfolio managers or the firm as a whole. These opinions are not intended to be a forecast of future events, a guarantee of results, or investment advice.

The performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance data quoted. Investors may obtain performance information current to the most recent month-end, within 7 business days, at [diamond-hill.com](#).

Performance returns assume reinvestment of all distributions. Returns for periods less than one year are not annualized.

Fund holdings subject to change without notice.

The Bloomberg Barclays U.S. 1-3 Yr. Gov./Credit Index is an unmanaged index of investment grade government and corporate bonds with maturities of one to three years. This index does not incur fees and expenses (which would lower the return) and is not available for direct investment.

All Fund returns based on Class I shares.

The Fund generated a 2.18% total return during the fourth quarter, compared to 1.64% for the Bloomberg Barclays U.S. Aggregate Index. Since its inception on July 5, 2016, the Fund has generated a total return of 1.41% compared to 0.09% for the Index. The goal of the Diamond Hill Core Bond Fund is to outperform the Index over a market cycle. We are pleased with how the Fund has performed on a relative basis, both in the most recent quarter and since its inception.

The Federal Open Market Committee (FOMC) became a major force of market volatility during the fourth quarter, straining a market already under stress due to ongoing trade war rhetoric, a global economic slowdown, and the lead up to the most recent government shutdown. Federal Reserve chairman Jerome Powell started the quarter off on October 3 with comments pertaining to the central bank's positioning, stating that, "We're a long way off from neutral at this point." The Treasury market reaction was swift and pronounced, with the yield on the 10-year jumping 12 bps on the day of the speech, from 3.06% to 3.18%. The yield on the 10-year Treasury continued to climb into early November, peaking at 3.24%, before declining heading into the Thanksgiving holiday week as concerns arose around the viability of a cease-fire in the trade war agreed upon between President Trump and Chinese President Xi Jinping. down over 9%. The 10-year Treasury rallied through the final part of the year, finishing the year at 2.68%. On December 22, the federal government partially shut down and remained so as of the end of the year.

Yields in the Treasury market moved dramatically across the curve as the shorter end (one-month to two to three year) moved higher and the longer end (five-year to 30-year) collapsed from a year-long high. The yield curve continued the trend of 2018, as spreads between the two-year and 10-year Treasury yields moved from 24.1 bps at the end of the third quarter to 19.5 bps at the end of the fourth quarter. The spread between the two-year and 10-year Treasury surged past its prior low for the year (18.9 bps on August 24), reaching 10.9 bps on December 19 during Jerome Powell's post-FOMC press conference. The short end of the Treasury curve inverted, as the five-year Treasury yield dropped below both the yield on the two-year and three-year Treasury during the first two and a half weeks of December.

The 10-year Treasury began the quarter at 3.06% and peaked in early October at 3.23% before rallying throughout the final weeks of the year to end the year at 2.65%. The shorter end of the curve followed a similar pattern as the 2-year Treasury began the quarter at 2.82%, peaked at 2.97% on November 8, and rallied into year-end to finish at 2.49%. The rally across the curve delivered the strongest quarterly performance for the 10-year Treasury (3.87%) since the first quarter of 2016 and the strongest performance for the 30-year since the second quarter of 2017. The Treasury index delivered 2.57% during the final quarter of the year, more than enough to offset the 1.67% lost during the first three quarters of 2018. Despite the Fund's longer duration posture in Treasuries relative to the index, the underweight exposure (19.6% vs. 38.9%) detracted from performance during the quarter.

The Fund's duration has been maintained within our targeted range of +/-10% of the benchmark's duration. At the end of the third quarter, the Fund's duration was 5.42 compared to the index duration of 6.03, reflecting the long-term viewpoint that interest rates have a greater chance of moving higher over the coming months and quarters. Rates rallied throughout the quarter, pushing the duration of the Bloomberg Barclays U.S. Aggregate Index to 5.87 at the end of the fourth quarter. The Fund added duration during the quarter and ended at 5.52, slightly longer than the previous quarter-end but still shorter than the index. The Fund's overall shorter duration positioning relative to the benchmark detracted from performance during the quarter.

The Bloomberg Barclays U.S. Corporate Index delivered negative quarterly returns for the third time in 2018, with the third quarter representing the only positive quarter. The index was dragged lower by the industrial sector, which was down 46 bps (negative 350bps excess return) while financials (+27 bps, down 233 bps excess) and utilities (+20 bps, down 325 bps excess) helped to offset some of the negative performance. The significant underperformance from an excess return standpoint reflects the strong quarter for Treasuries combined with the dwindling appetite for risk going into year-end. The Fund's positioning in its

corporate allocation contributed to performance as a result of the significant underweight in industrials and slight overweight allocation to financials.

While the investment grade and high yield markets experienced one of the more difficult quarters in recent memory, the securitized market continued to deliver strong absolute returns. Residential Mortgage-Backed securities delivered the strongest performance during the quarter, with 2.08% return, followed by Commercial Mortgage-Backed Securities (CMBS) with 1.72% return and Asset-Backed Securities (ABS) returning 1.25%. Relative to comparable duration Treasuries, which delivered strong performance during the quarter, the shorter duration ABS market trailed by 16 bps, RMBS trailed by 53 bps and CMBS trailed by 112bps. Within the ABS sector, autos returned 1.12% (-17 bps excess return) and credit cards returned 1.35% (-14 bps excess return). The Fund's overweight in the securitized sector contributed to performance during the quarter, with Residential MBS delivering the strongest contribution.

The Fund continues to search for opportunities in the marketplace while maintaining a conservative risk profile relative to the Index.

All Fund returns based on Class I shares.

The Fund generated a -2.23% total return during the fourth quarter compared to -0.80% for the ICE Bank of America Merrill Lynch U.S. Corporate & High Yield Index. Year to date, the Fund generated a 0.64% total return compared to -2.21% for the Corporate & High Yield Index. For the trailing five years, the Fund generated an annualized total return of 4.83% compared to 3.40% for the Corporate & High Yield Index.

Unlike most corporate bond funds, the Diamond Hill Corporate Credit Fund is not managed against any index. Instead, the Fund is managed against absolute objectives within a range of inflation plus 3% and 7% nominal, each measured over rolling five-year periods. Our goal is to generate a yield and total return within that range while minimizing the risk of downside volatility over longer time periods. Although the Fund's investable universe (and the Corporate & High Yield Index) includes both investment grade and high yield corporate bonds, since early 2010 the Fund has been largely focused on the high yield portion of the market to achieve these objectives. About 86% of the Fund was in high yield corporate bonds at the end of the fourth quarter.

The high yield portion of the U.S. corporate bond market, as represented by the ICE Bank of America Merrill Lynch U.S. High Yield Index, began the year with a yield to worst (YTW) of 5.84% and an option-adjusted spread (OAS) of 363 basis points. After generating a -2.26% total return for the year, the High Yield Index ended the year with a 7.95% YTW and OAS of 533 basis points. A YTW close to 8% is a much better starting point for the high yield asset class than 5.8% at the beginning of 2018 or 4.8% at the peak of the last high yield cycle in late June 2014.

We want to hold up better than peers in down markets and then capture our fair share of the upside in strong markets. This should allow us to achieve our objectives and generate competitive returns over a complete market cycle. Thus, we were gratified to generate a positive total return in a down market during 2018. Further, the Fund was one of only eight funds in the Morningstar High Yield Category that was positive each of the last five calendar years, and the other six were short-duration high yield funds. The Fund was one of only two funds in the Morningstar High Yield Category that was positive in each of the last 10 calendar years, and the other fund was a short-duration high yield fund.

Our structural advantages helped immensely. Because we do not manage against any benchmark, we came into the year with much less exposure to the BB-portion of the high yield market which was overvalued with too much interest rate risk. As Treasury yields increased and credit spreads widened, we increased our exposure to that part of the market by 18 percentage points, exiting the year with a much higher credit quality portfolio than we have had since the middle of 2014. Because we evaluate our performance over rolling five-year periods, we felt no need to chase the strong but overvalued high yield market in the third quarter and we were positioned defensively coming into the fourth quarter. Because we concentrate in our best ideas regardless of their weight in any benchmark, our credit selection outweighed the material spread widening of the High Yield Index in 2018. For example, the Fund generated positive returns in 11 out of 18 industries compared to only four out of 18 in the High Yield Index.

The Fund's YTW is typically somewhere in the range of our absolute objectives, although it was well below the low end of the range in late June 2014 and well above the high end of the range in early February 2016 (the most recent bottom of the high yield market). At the end of 2018, the Fund's YTW was 6.51%. The Fund's duration was 3.74, above its typical 2.0-3.5 range but still below the High Yield Index duration of 4.19 and the Corporate & High Yield Index duration of 6.48. Materially wider credit spreads far outweigh any remaining concerns about interest rate risk.

The first three quarters of 2018 were characterized by rising Treasury yields, yield curve flattening, stable credit spreads and, after April, muted volatility. The Fed hiked three times and was signaling one more hike in the fourth quarter. The Treasury market moved in sync with the Fed, although the back end of the curve did not increase as much as the front end, so the curve flattened.

Much of this regime changed dramatically in the fourth quarter. Volatility spiked and stayed elevated through the end of the year. Through the November 8 meeting of the Federal Reserve, the volatility was led by a move higher in Treasury yields that seemed to ratify hawkish comments from Fed Chair Powell in early October. Diverging from the move in Treasuries, stocks and high yield bonds were 4-9% off their highs. Oil had declined 20% from its October 3 peak and trade tensions with China were escalating. In its November 8 statement, the Fed did not acknowledge any meaningful change to the environment or to its outlook.

Between the Fed's November 8 and December 19 meetings, Treasury yields came back down and stocks and high yield bonds declined markedly. For example, the 10-year Treasury yield peaked at 3.24% on November 8 but declined by 42 basis points to 2.82% on December 18. The S&P 500 was down 9% between meetings and 13% from the peak while the Russell 2000 was down 13% between meetings and 20% from the peak. The High Yield Index was down

2.2% between meetings and 3.4% from the peak. (Because high yield bonds are senior to equity in the capital structure, they held up much better than equities in the sell-off, as we would expect.)

This was a treacherous set-up for the Fed's December 19 meeting, exacerbated by limited liquidity in financial markets going into the Christmas and New Year holidays. On December 19, the Fed hiked another 25 basis points but its median projections for hikes in 2019 and the long-run neutral Fed Funds rate each came down by 25 basis points. Financial markets initially took this new information in stride until the post-statement press conference. In light of the lowered expectations for interest rate hikes, Fed Chair Powell was asked the predictable question of whether the Fed might alter the pace of its balance sheet reduction. The Chair responded by saying that the balance sheet reduction was on "autopilot." Risk assets, like stocks and high yield bonds, immediately sold off and Treasuries rallied.

PERIOD AND AVERAGE ANNUAL TOTAL RETURNS AS OF DECEMBER 31, 2018

¹ The Fund may invest in another Diamond Hill Fund. Diamond Hill Capital Management, Inc. is required to permanently waive a portion of its management fee in the pro-rata amount of the management fee charged by the underlying Diamond Hill Fund.

Risk Disclosure: The value of fixed-income securities varies inversely with interest rates; as interest rates rise, the market value of fixed-income securities will decline. Lower quality debt (i.e.: "High Yield") securities involve greater risk of default or price changes due to potential changes in the issuer's credit quality.

The views expressed are those of the portfolio managers as of December 31, 2018, are subject to change and may differ from the views of other portfolio managers or the firm as a whole. These opinions are not intended to be a forecast of future events, a guarantee of results, or investment advice.

The performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance data quoted. Investors may obtain performance information current to the most recent month-end, within 7 business days, at [diamond-hill.com](#).

Performance returns assume reinvestment of all distributions. Returns for periods less than one year are not annualized. Class I shares include Class A share performance achieved prior to the creation of Class I shares. Class I shares have no sales charge.

Fund holdings subject to change without notice.

Like all mutual funds, Diamond Hill Funds are not FDIC insured, may lose value, and have no bank guarantee.

While there is some debate on how the Fed's balance sheet reduction impacts financial markets, the spike in volatility since the beginning of the fourth quarter coincided with the first month in years that the big four global central banks were not collectively increasing the size of their balance sheets. In our judgment this had a meaningful impact on the willingness of market participants to bear risk and the Fed Chair's message that the balance sheet reduction was on "autopilot" was not sufficiently sensitive to the market signals leading into the December 19 meeting.

Markets delivered an unequivocal message to the Fed with stocks declining about 8% in the four trading sessions beginning with the December 19 Fed press conference. Since then, the Fed has repeatedly walked back the "autopilot" comment and stocks regained most of the final 8% decline by the end of the year. Still, at the end of the year, the S&P 500 was down about 14% from its September 20 peak while the Russell 2000 was down about 22% from its August 30 peak. The High Yield Index was down about 5% from its October 3 peak.

To engineer a soft landing for the economy, it is appropriate for the Fed to tighten financial conditions. The Fed, as well as other central banks, is also trying to get out of the business of suppressing volatility in financial markets. However, this will not be easy and financial conditions had probably tightened too much at the Christmas Eve lows in stocks. With inflation contained and inflation expectations coming down, there is no need for the Fed to push the economy into recession.

Some part of the decline in risk assets is attributable to the potential of a policy error not just by the Fed, but also by the Trump administration, Congress, or by authorities elsewhere in the world. It is important that authorities pay close attention to significant and sustained market signals. Some part of the decline is attributable to signs that global growth is slowing. Finally, some part of the decline is attributable to a "liquidity recession." One example of this "liquidity recession" in the high yield market is that investors in high yield ETFs expect more liquidity from those ETFs than the underlying high yield market can deliver. All of these factors feed on each other, making it difficult to discern how much each is influencing the financial markets.

We expect volatility to remain elevated for the foreseeable future as is typical late in the economic and market cycles. Over the next three to five years, starting from an 8% YTW, we forecast returns from high yield bonds somewhere between reasonable to good depending on how long the economic cycle is sustained. As always, we are focused on delivering risk-adjusted returns over a complete market cycle by holding up better during down cycles and capturing our fair share of up cycles.

All Fund returns based on Class I shares.

The Fund generated a -2.58% total return during the fourth quarter compared to -4.67% for the ICE Bank of America Merrill Lynch U.S. High Yield Index. For the year, the Fund generated a total return of 1.16% compared to -2.26% for the High Yield Index. Since inception on December 4, 2014, the Fund generated an annualized total return of 6.40% compared to 3.93% for the High Yield Index.

The High Yield Index began the year with a yield to worst (YTW) of 5.84% and option-adjusted spread (OAS) of 363 basis points. After generating a -2.26% total return for the year, the High Yield Index ended the year with a 7.95% YTW and OAS of 533 basis points. A YTW close to 8% is a much better starting point for the high yield asset class than 5.84% at the beginning of 2018 or 6.38% at the Fund's inception. The Fund ended the year with a 7.07% YTW and a duration of 4.18, within our typical duration range of plus or minus 10% of the High Yield Index.

We want to hold up better than peers in down markets and then capture our fair share of the upside in strong markets. This should allow us to generate competitive high yield returns over a complete market cycle. Thus, we were gratified to generate a positive total return in a down market during 2018. Further, the Fund was also positive in 2015, the other negative high yield year during the Fund's existence.

Our structural advantages helped immensely. Because of our willingness to look different than the benchmark, we came into the year with much less exposure to the BB-portion of the high yield market which was overvalued with too much interest rate risk. As Treasury yields increased and credit spreads widened, we increased our exposure to that part of the market by 18 percentage points, exiting the year with a much higher credit quality portfolio than we have had since inception. Because we evaluate our performance over rolling five-year periods, we felt no need to chase the strong but overvalued high yield market in the third quarter and we were positioned defensively coming into the fourth quarter. Because we concentrate in our best ideas regardless of their weight in the benchmark, our credit selection outweighed the material spread widening of the High Yield Index in 2018. For example, the Fund generated positive returns in 13 out of 18 industries compared to only four out of 18 in the High Yield Index.

The first three quarters of 2018 were characterized by rising Treasury yields, yield curve flattening, stable credit spreads and, after April, muted volatility. The Fed hiked three times and was signaling one more hike in the fourth quarter. The Treasury market moved in sync with the Fed although the back end of the curve did not increase as much as the front end so the curve flattened.

Much of this regime changed dramatically in the fourth quarter. Volatility spiked and stayed elevated through the end of the year. Through the November 8 meeting of the Federal Reserve, the volatility was led by a move higher in Treasury yields that seemed to ratify hawkish comments from Fed Chair Powell in early October. Diverging from the move in Treasuries, stocks and high yield bonds were 4-9% off their highs. Oil had declined 20% from its October 3 peak and trade tensions with China were escalating. In its November 8 statement, the Fed did not acknowledge any meaningful change to the environment or to its outlook.

Between the Fed's November 8 and December 19 meetings, Treasury yields came back down and stocks and high yield bonds declined markedly. For example, the 10-year Treasury yield peaked at 3.24% on November 8 but declined by 42 basis points to 2.82% on December 18. The S&P 500 was down 9% between meetings and 13% from the peak, while the Russell 2000 was down 13% between meetings and 20% from the peak. The High Yield Index was down 2.2% between meetings and 3.4% from the peak. (Because high yield bonds are senior to equity in the capital structure, they held up much better than equities in the sell-off, as we would expect.)

This was a treacherous set up for the Fed's December 19 meeting, exacerbated by limited liquidity in financial markets going into the Christmas and New Year holidays. On December 19, the Fed hiked another 25 basis points but its median projections for hikes in 2019 and the long-run neutral Fed Funds rate each came down by 25 basis points. Financial markets initially took this new information

in stride until the post-statement press conference. In light of the lowered expectations for interest rate hikes, Fed Chair Powell was asked the predictable question of whether the Fed might alter the pace of its balance sheet reduction. The Chair responded by saying that the balance sheet reduction was on “autopilot.” Risk assets, like stocks and high yield bonds, immediately sold off and Treasuries rallied.

While there is some debate on how the Fed’s balance sheet reduction impacts financial markets, the spike in volatility since the beginning of the fourth quarter coincided with the first month in years that the big four global central banks were not collectively increasing the size of their balance sheets. In our judgment this had a meaningful impact on the willingness of market participants to bear risk and the Fed Chair’s message that the balance sheet reduction was on “autopilot” was not sufficiently sensitive to the market signals leading into the December 19 meeting.

Markets delivered an unequivocal message to the Fed with stocks declining about 8% in the four trading sessions beginning with the December 19 Fed press conference. Since then, the Fed has repeatedly walked back the “autopilot” comment and stocks regained most of the final 8% decline by the end of the year. Still, at the end of the year, the S&P 500 was down about 14% from its September 20 peak while the Russell 2000 was down about 22% from its August 30 peak. The High Yield Index was down about 5% from its October 3 peak.

To engineer a soft landing for the economy, it is appropriate for the Fed to tighten financial conditions. The Fed, as well as other central banks, is also trying to get out of the business of suppressing volatility in financial markets. However, this will not be easy and financial conditions had probably tightened too much at the Christmas Eve lows in stocks. With inflation contained and inflation expectations coming down, there is no need for the Fed to push the economy into recession.

The quoted performance for the Fund reflects the past performance of the Diamond Hill High Yield Fund, L.P. (the “High Yield Partnership”), a private fund managed with full investment authority by the fund’s Adviser. The Fund is managed in all material respects in a manner equivalent to the management of the predecessor unregistered fund. The assets of the High Yield Partnership were converted into assets of the fund prior to commencement of operation of the fund. The performance of the High Yield Partnership has been restated to reflect the net expenses and maximum applicable sales charge of the fund for its initial years of investment operations. The High Yield Partnership was not registered under the Investment Company Act of 1940 and therefore was not subject to certain investment restrictions imposed by the 1940 Act. If the High Yield Partnership had been registered under the 1940 Act, its performance may have been adversely affected. Performance is measured from December 4, 2014, the inception of the High Yield Partnership and is not the performance of the fund. The assets of the High Yield Partnership were converted, based on their value on December 31, 2015, into assets of the fund prior to commencement of operations of the fund. The High Yield Partnership’s past performance is not necessarily an indication of how the fund will perform in the future either before or after taxes.

Performance returns assume reinvestment of all distributions. Returns for periods less than one year are not annualized. Class I shares have no sales charge.
