Item 4. Advisory Business

THE COMPANY

Diamond Hill Capital Management, Inc. (“Diamond Hill” or “the firm” or “us” or “we”) is a wholly owned subsidiary of Diamond Hill Investment Group, Inc. (“DHIL”, “the parent” or “the parent company”), a publicly traded company listed on NASDAQ and trading under the symbol DHIL.

The firm registered as an investment adviser with the SEC on June 2, 1988, and the parent was incorporated on April 18, 1990. The parent was taken public in 1993 under the name Banc Stock Group. In 2000, the parent changed its name to Diamond Hill Investment Group, Inc. as part of a reorganization intended to create an investment management focused firm.

As of December 31, 2018, employees and directors of DHIL and its affiliates owned approximately 20% of the shares outstanding, while non-affiliated investors owned the remaining 80% of the shares. As a publicly traded company, the ownership percentage changes on a regular basis.

INVESTMENT SERVICES

Diamond Hill provides investment management services to individual and institutional investors through mutual funds, separate accounts, and private investment funds. Diamond Hill offers eleven equity investment strategies, and four fixed income investment strategies. (Item 8 provides more information about our investment strategies.). We do not provide financial planning services, and we do not advise our clients in the selection of other investment advisers or mutual funds not managed by Diamond Hill. Our clients choose one or more of our fifteen investment strategies to meet their needs. Upon request, Diamond Hill will work with clients to accommodate client-specific restrictions on any of our investment strategies.

Our portfolio strategies may include investments in U.S. and foreign common stocks (including real estate investment trusts, American depository receipts, and master limited partnerships), preferred stocks, investment-grade and non-investment grade corporate bonds, asset-backed securities, mortgage-related and mortgage-backed securities, U.S. Government and agency securities, U.S. dollar denominated foreign debt securities, convertible securities (including stocks and convertible corporate bonds), other structured instruments, open and closed-end investment companies (including exchange traded funds), and private partnerships (also known as hedge funds).

WRAP FEE PROGRAMS

Diamond Hill participates as an investment adviser in several wrap fee programs that are offered by third-party wrap program sponsors (typically broker-dealers). A wrap fee program is an investment advisory program under which a client typically pays a single fee to the sponsor based on assets under management. Fees paid are not based directly upon transactions in the client's account or the execution of client transactions. Wrap fee program clients typically select Diamond Hill from a list of investment advisers presented to clients by registered representatives of the sponsor. Wrap fee program clients are typically high net worth individuals or small institutions. The program sponsor determines the fee to charge to the wrap fee program clients and has primary responsibility for client communications and service. Diamond Hill provides investment management services to the clients. The program sponsor typically executes the client's portfolio transactions, and in most cases, provides custodial services for the client's assets for the single fee paid by the client to the sponsor. Diamond Hill is paid a portion of the wrap fee (management fee) for its services by the program sponsor. Wrap fee accounts are considered directed brokerage accounts. When determining whether or not to participate in a wrap fee program you should consider, among other things, Diamond Hill's brokerage practices and the fees charged by the program sponsor in relation to the expected trading volume. (Item 12 provides more information about our brokerage practices, including our treatment of directed brokerage accounts.). When we report the number of clients that Diamond Hill provides investment management services to, we generally consider the wrap sponsor as a client instead of the underlying wrap fee program client accounts.

UNIFIED MANAGED ACCOUNT (“UMA”) PROGRAMS

Diamond Hill provides services to UMA programs in which an investment manager provides its strategy model portfolio to the sponsor of the UMA program. In these instances, Diamond Hill does not have discretionary investment authority over individual client accounts. Another manager, typically the program sponsor or its designee, is the discretionary investment manager of, has investment discretion over, and is responsible for monitoring the client accounts. Diamond Hill provides an updated strategy model portfolio to the sponsors on a periodic basis.

The program sponsor determines the fee to charge the UMA program client. Diamond Hill is paid a portion of the UMA fee for its services by the program sponsor at a pre-determined rate based on assets in the program.

ASSETS UNDER MANAGEMENT

As of March 31, 2019, Diamond Hill had \$20.1 billion in assets under management. All of these assets were discretionary assets.

Item 5. Fees and Compensation

COMPENSATION FOR ADVISORY SERVICES

Diamond Hill furnishes continuous investment management supervision to client accounts. Such investment management is based on the investment objectives and investment guidelines of each client. Management fees for our services are based on the value that we expect to add over rolling five-year periods, vary by investment strategy, and are generally calculated based on a percentage of assets under management. Below are our separate account standard fee schedules:

Tier	Small Cap	Small-Mid Cap	Mid Cap	Large Cap
First \$20 million	0.90%	0.85%	0.70%	0.60%
Above \$20 million	0.80%	0.75%	0.60%	0.50%
Minimum Account Size	\$10 million	\$10 million	\$10 million	\$10 million

Tier	Large Cap Concentrated	All Cap Select	Global
First \$20 million	0.65%	0.80%	0.75%
Above \$20 million	0.55%	0.70%	0.65%
Minimum Account Size	\$10 million	\$10 million	\$10 million

Tier	Corporate Credit	High Yield
First \$50 million	0.55%	0.60%
Above \$50 million	0.45%	0.50%
Minimum Account Size	\$25 million	\$25 million

Tier	Core Bond
First \$50 million	0.29%
Next \$50 million	0.22%
Above \$100 million	0.18%
Minimum Account Size	\$25 million

Tier	Short Duration Total Return
First \$200 million	0.45%
Above \$200 million	0.35%
Minimum Account Size	\$200 million

(Item 8 provides a description of the investment strategies that are available as a separate account.).

Diamond Hill reserves the right to negotiate fees. Some clients pay more or less than others depending on certain factors including, but not limited to, the type and size of the account, the range of additional services provided to the client, and the total amount of assets managed for a single client. Clients whose account value is below the above minimum account sizes may pay fees that are higher than those listed above. Additionally, some clients pay us a performance-based advisory fee. (Item 6 provides more information about performance-based fees.). The fees that we charge for investment advisory services are specified in an agreement between Diamond Hill and each individual client.

DIAMOND HILL FUNDS

To the extent a separate account is invested in a Diamond Hill Fund or a Diamond Hill private investment fund (each a “Fund”), the account is not assessed a management fee on the portion of the separate account invested in the Fund. The Fund will, however, incur management and other fees imposed by the Fund as disclosed in each Fund’s prospectus or offering document. (Item 10 provides more information about Diamond Hill’s involvement with the Diamond Hill Funds and Diamond Hill private investment funds.).

PAYMENT OF FEES

Management fees are generally billed and payable quarterly in arrears. Fees are generally based on the value of the account as of the last business day of the quarter (or average of the month-end values) and are normally adjusted for material cash flows. When an account is opened or terminated, the fee is pro-rated to the opening or termination date. Diamond Hill provides clients with fee invoices which contain the amount of the fee, the value of the assets in the account on which the fee was based, and the specific way the fee was calculated.

If authorized by a particular client, Diamond Hill may deduct its management fees directly from the client’s custodian account. In this situation, Diamond Hill will send a copy of the invoice details directly to the client and the custodian. It is Diamond Hill’s understanding, as communicated to the client and its custodian, that the custodian sends quarterly (or more frequent) statements directly to the client or its representative showing all assets and transactions in the account, including fees paid to Diamond Hill.

OTHER FEES OR EXPENSES

Clients pay other expenses in addition to the fees paid to Diamond Hill. For example, clients pay costs such as brokerage commissions, transaction fees, custodial fees, transfer taxes, wire transfer fees, and other fees and taxes charged to brokerage accounts and securities transactions, which are unrelated to the fees collected by Diamond Hill. (Item 12 provides more information on our brokerage practices.).

Cash balances in client separate accounts may be invested in unaffiliated short-term investment funds (“STIFs”) (which include money market funds) designated by a client or its custodian. Diamond Hill does not attempt to assess the quality of the underlying assets of a STIF selected by a client or its custodian. Diamond Hill does not provide any advisory fee credit for client assets invested in a STIF, which means that such assets will typically bear not only their proportionate share of the expenses of the STIF, but also management fees charged by Diamond Hill.

ADDITIONAL COMPENSATION

Diamond Hill and its employees do not accept compensation, including sales charges or service fees, from any person for the sale of securities or other investment products.

Item 6: Performance-Based Fees and Side-By-Side Management

Diamond Hill may receive performance-based fees from our private investment funds and separate accounts.¹

POTENTIAL CONFLICTS OF INTEREST

The receipt of performance-based fees from separate accounts or our private investment funds creates conflicts of interest. Diamond Hill can potentially receive higher fees from accounts with a performance-based compensation structure than from those accounts that pay a fixed asset-based fee as described in Item 5. For example, Diamond Hill has an incentive to direct the best investment ideas to an account that pays a performance-based fee or to allocate or sequence trades in favor of the performance fee account. To manage these potential conflicts:

- All accounts within a strategy are managed to the strategy's model portfolio.
- Diamond Hill performs a periodic review of each investment strategy's model portfolio versus each client account. In this review, every position size for each client account is compared to our model weights. In addition, portfolios are monitored by our compliance department for consistency with client objectives and restrictions.
- Diamond Hill has implemented policies whereby portfolio manager incentive compensation is based solely upon the performance of the respective strategy that they manage. This policy is intended to incent portfolio managers to act in the best interests of all clients regardless of their fee type.
- Diamond Hill has trade allocation policies and procedures designed to ensure that all clients are treated fairly and equally and to prevent this conflict from influencing the allocation of investment opportunities among clients.

Diamond Hill has another potential conflict of interest, as an adviser to both long-only accounts and accounts that execute short sales. We could sell short securities in a long-short account while holding the same security long in a long-only account. In this case, we could harm the performance of the long-only accounts for the benefit of accounts that execute short sales, which may include performance-based fee accounts. For example,

¹ A performance-based fee is an advisory fee based on a percent of capital gains on or capital appreciation of client assets. Performance-based fees paid to investment advisers may be significantly higher than fixed asset-based fees paid on traditional accounts.

continually selling a position short may depress the stock price, potentially harming a long-only account if it holds the same security. To manage this conflict, Diamond Hill has a specific policy that prohibits a long position from being held as a short position in any client account.

Item 7: Types of Clients

Diamond Hill provides investment management services to a wide variety of clients, including institutions, registered investment companies, private investment funds, financial institutions, financial intermediaries, annuity funds, pooled investment vehicles, charitable institutions, high net worth investors, foundations, trusts, state and municipal government entities, endowment funds, insurance companies, corporations, hospitals, corporate pension and profit-sharing plans, and Taft-Hartley plans.

Diamond Hill also offers investment advisory services to the clients of wrap sponsors. In accounts introduced to Diamond Hill by a wrap sponsor, the client either enters into agreements directly with both Diamond Hill and the sponsor, or enters into an agreement solely with the sponsor or another entity that has an agreement with the sponsor. (Item 4 provides a discussion on wrap fee programs.).

Item 8: Methods of Analysis, Investment Strategies and Risk of Loss

DIAMOND HILL INVESTMENT STRATEGIES

We offer nine equity and four fixed income investment strategies:

Equity Strategies

Small Cap Strategy – Invests in primarily U.S. equity securities of small capitalization companies selling at prices below our estimate of intrinsic value.

Small-Mid Cap Strategy – Invests in primarily U.S. equity securities of small and medium capitalization companies selling at prices below our estimate of intrinsic value.

Mid Cap Strategy – Invests in primarily U.S. equity securities of medium capitalization companies selling at prices below our estimate of intrinsic value.

Large Cap Strategy – Invests in primarily U.S. equity securities of large capitalization companies selling at prices below our estimate of intrinsic value.

Large Cap Concentrated Strategy – Invests in a concentrated portfolio of primarily U.S. equity securities derived from the holdings in the Large Cap strategy selling at prices below our estimate of intrinsic value. Typically, the Large Cap Concentrated holdings represent the largest weights in the Large Cap strategy; however, for diversification and other reasons, they may not be the top positions in order of magnitude.

All Cap Select Strategy – Invests in a concentrated portfolio of primarily U.S. equity securities of companies across a broad range market capitalization selling at prices below our estimate of intrinsic value. We anticipate that each of the All Cap Select strategy's investments will also be held in one of our other equity strategies.

Global Strategy – Invests in U.S. and foreign equity securities of companies across a broad range of market capitalization selling at prices below our estimate of intrinsic value.

Long-Short Strategy – Seeks to buy long (or sell short) primarily U.S. equity securities of companies at selling prices below (or above) our estimate of intrinsic value.²

Research Opportunities Strategy – Seeks to buy long (or sell short) primarily U.S. equity securities of companies across a broad range of market capitalization selling at

² The Long-Short and Research Opportunities strategies are only available to investors through the respective mutual fund managed by Diamond Hill.

prices below (or above) our estimate of intrinsic value. The strategy may invest up to 40% in international equities and up to 20% in fixed income securities.³

Equity Strategies – Investment Philosophy

We believe that a company's intrinsic value is independent of its stock price. We also believe competitive long-term returns can be achieved by investing in companies when the current market price is at a discount (or premium in the case of short positions) to our estimate of intrinsic value, based upon a discounted cash flow methodology.

The following are the guiding principles for our investment philosophy:

- **Treat every investment as a partial ownership interest in that company.**
Investing is most intelligent when it is viewed through the lens of an owner.
- **Always invest with a margin of safety.**
Our discipline is to purchase (sell short) securities at a sufficient discount (premium) to our estimate of intrinsic value. We estimate the intrinsic value of the business independent of the current stock market price then compare our estimate to the price to determine if an opportunity exists. When we successfully identify securities trading below (above) our estimate of intrinsic value, it increases potential reward and serves as the most effective risk control.
- **Possess a long-term investment temperament.**
In the short term, emotion as much as economic fundamentals drives market prices. Over time, the economic performance of the business and the price paid, versus the market, will determine investment return.
- **Recognize that market price and intrinsic value tend to converge over a reasonable period of time.**
Investment opportunity lies in the ability to buy (or short), when the current market price does not reflect a company's intrinsic value, and to sell (or cover) when price and value converge.

Investing in securities always involves the risk of loss that investors should understand and be prepared to bear.

Our investment strategy is actively managed and intrinsic value-focused. Bottom-up analysis is of primary importance. We use a discounted cash flow methodology to estimate intrinsic value and then compare our estimate to the current market price. Our portfolios are differentiated by the fact that we manage independent of benchmark weights.

Our valuation approach is based on a five-year discounted cash flow methodology for both long and short positions. This methodology is used to determine whether there is a discrepancy between the current market price and our estimate of intrinsic value.

To forecast the amount and timing of a company's cash flows, we concentrate on the fundamental economic drivers of the business. We evaluate all publicly available material information that may aid us in forecasting future cash flows. Considerations include: industry competition, regulatory factors, the threat of technological obsolescence, and a variety of other factors. Other fundamental factors we use to estimate intrinsic value include: normalized earnings and earnings growth rate; payout ratio and dividends; terminal P/E multiple; and required rate of return.

Our investment team consists of portfolio managers, research analysts, and research associates. Research team members focus on a specific sector or a few industries, while our portfolio managers are generalists. Portfolio managers also function as analysts for all of our portfolios. Similar to the research analysts, the portfolio managers of other Diamond Hill strategies may make recommendations in their role as analyst.

The research group is organized by sector teams, with a sector leader for each team. Portfolio managers work closely with sector teams, providing a link between the research and portfolio management functions, a mentor for research analysts and associates, and an additional source of broad sector and industry knowledge.

Portfolio managers are responsible for investment decision-making, including asset allocation, security selection, portfolio construction, and portfolio risk management. Since we place high value on independent thought, the portfolio managers are ultimately accountable for the strategy results and are not subordinate to an investment committee. Assistant portfolio managers provide significant analytical support and serve as backups to the portfolio managers. If a portfolio manager is unavailable, assistant portfolio managers have the authority to make investment decisions.

We regularly compare market price to our estimate of intrinsic value for every holding or short position. We will sell a holding (cover a short position) under the following circumstances:

- If the market price reaches our estimate of intrinsic value, we examine all model assumptions. Unless there is justification to adjust our assumptions, we will exit the position.
- If our estimate of intrinsic value is lowered (raised) due to a change in the fundamentals, such that the current market price is no longer at a discount (premium) to our estimate of intrinsic value, we will exit the position.
- If a more attractive investment opportunity is identified, we may sell (cover) a holding to raise proceeds.
- If a holding's position size reaches our stated limit of the portfolio at market, we reduce the position. Typically, we trim a position as it approaches the limit, rather than allowing it to exceed the limit.

We define risk as the permanent loss of capital rather than short-term price volatility. We manage risk through our intrinsic value-focused investment philosophy and disciplined investment process. Portfolio managers are ultimately accountable for managing risk in a portfolio. By focusing stock selection on securities selling at discounts (or premiums if selling short) to our estimates of intrinsic value, we believe we have a built in “margin of safety.” Thus, our primary risk control is to compare current market prices regularly to our estimates of intrinsic value.

To limit downside risk, we diversify portfolios by managing sector, industry, and position weights according to the following general guidelines:

- For long positions, an individual security cannot be more than 7% (10% for the Large Cap Concentrated strategy) of the portfolio at market.
- For short positions, an individual security cannot be more than 3% of the portfolio at market.
- Maximum exposure to any one industry is limited to 20% (25% for the Large Cap Concentrated and Global strategies) of the portfolio at market.
- Maximum exposure to any one sector is limited to 30% (35% for the Large Cap Concentrated, All Cap Select, and Global strategies) of the portfolio at market.

Equity Strategies – Investment Risks

The material risks associated with our equity strategies are:

Equity Market Risk – Overall stock market risks may affect the value of the investments in equity strategies. Factors such as U.S. economic growth and market conditions, interest rates, and political events affect the equity markets.

Management Risk – Our judgments about the attractiveness, value and potential appreciation of a particular asset class or individual security may be incorrect and there is no guarantee that individual securities will perform as anticipated. The value of an individual security can be more volatile than the market as a whole or our intrinsic value approach may fail to produce the intended results. Our estimate of intrinsic value may be wrong or even if our estimate of intrinsic value is correct, it may take a long period of time before the price and intrinsic value converge.

Small and Mid Cap Company Risk – Investments in small and medium capitalization companies may be riskier than investments in larger, more established companies. The securities of these companies may trade less frequently and in smaller volumes than securities of larger companies. In addition, small and medium capitalization companies may be more vulnerable to economic, market, and industry changes. Because smaller companies may have limited product lines, markets or financial

resources, or may depend on a few key employees, they may be more susceptible to particular economic events or competitive factors than larger capitalization companies.

Concentration Risk – Some strategies concentrate their investments in a small number of securities to create a reasonably diversified equity portfolio. The small number of securities held may not be diversified across all sectors or industries as compared to a broad index, such as the S&P 500 or Russell 3000 Indices. The value of a client account will vary considerably in response to changes in the market value of individual securities, industries, or sectors. This may result in higher volatility.

Short Sale Risk – Short sales are speculative transactions and involve special risks. In order to initiate a short position, a security must be borrowed. Strategies that execute short sales may incur a loss if the price of the security sold short increases in value between the date of the short sale and the date when we purchase the security to replace the borrowed security. Losses are potentially unlimited in a short sale transaction.

Foreign and Emerging Market Risk – Certain strategies may invest in securities listed on a foreign market and U.S. exchange listed securities of companies domiciled in foreign (non-U.S.) countries that may experience more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. companies. These companies may be subject to additional risks, including political and economic risks, civil conflicts and war, greater volatility, expropriation and nationalization risks, currency fluctuations, higher transaction costs, delayed settlement, possible foreign controls on investment, and less stringent investor protection and disclosure standards of foreign markets. These risks are magnified in emerging markets.

Fixed Income Strategies

Short Duration Total Return Strategy – Seeks to maximize total return consistent with the preservation of capital by investing in a diversified portfolio of high, medium, and low-grade fixed income securities with a focus on securities and spread sectors we believe to be undervalued. The strategy generally maintains a duration of less than three.

Core Bond Strategy – Seeks to maximize total return consistent with the preservation of capital by investing in a diversified portfolio of investment grade intermediate and long-term fixed income securities with a focus on securities and spread sectors we believe to be undervalued.

Corporate Credit Strategy – Seeks to provide high current income, preservation of capital, and total return over a five-year time horizon by investing primarily in investment grade and below-investment grade corporate bonds. Securities are purchased when we believe the yield and total return potential are attractive relative to asset and interest coverage and relative to other securities with comparable risk.

High Yield Strategy – Seeks to provide high current income with the opportunity for capital appreciation by investing primarily in below-investment grade corporate bonds. Securities are purchased when we believe the yield and total return potential are attractive relative to asset and interest coverage and relative to other securities with comparable risk.

Fixed Income Strategies – Investment Philosophy

We manage our fixed income strategies with the same intrinsic value investment philosophy as our equity strategies. We believe intrinsic value is independent of market price and that competitive long-term returns can be achieved by identifying meaningful differences between the two. Our investment strategy is driven by individual security decisions rather than by macro-economic focus.

Short Duration Total Return and Core Bond

Our investment process is driven by security selection, sector allocation, yield curve positioning, and duration management in concert with the overall maintenance of a high quality portfolio. We seek to generate excess return through the selection of undervalued securities and spread sectors.

We primarily focus on identifying undervalued securities, which may result in owning securities that are not included in each strategy's benchmark index. Portfolio managers and research analysts continually monitor and analyze potential securities to determine suitability.

Our primary focus is on the selection of high-quality individual issues with an emphasis on identifying undervalued securities. Individual securities are selected following a risk/reward evaluation of interest rate risk, credit risk, and an examination of the complex legal and technical structure of the security.

Portfolio managers may consider corporate bonds, residential and commercial mortgage-backed securities, asset-backed securities, Treasury securities, and agency bonds for inclusion in the portfolio. We use quantitative valuation methodologies to identify securities we believe to be undervalued, fairly valued, and overvalued.

Although bottom-up analysis and security selection is of primary importance, we also pay close attention to sector and sub-sector valuations, duration, yield curve, and quality in portfolio construction.

- Sector Allocation – Historical spread analysis is also conducted to identify sectors that may be overvalued or undervalued and to establish the risk/return trade-off between

sectors. When undervalued securities can be readily identified within sectors with attractive sector dynamics, then those sectors are emphasized in the portfolio.

- **Duration** – Duration is carefully managed to help control interest rate risk; however, we use it sparingly as an active portfolio management tool. The duration decision is based on internal interest rate forecasts, which incorporate many factors such as the outlook for inflation, anticipated Federal Reserve policy, and the overall economic environment. We adjust portfolio duration periodically, typically in small increments, to enhance returns when the market is undervalued and to protect portfolio value when the market is overvalued.
- **Yield Curve** – In conjunction with the portfolio duration decision, we identify broad interest rate trends and supply and demand relationships that may influence the shape of the yield curve. As part of the investment process, we evaluate the risk/reward posture of every maturity along the yield curve in an effort to identify undervalued portions of the yield curve. For a given duration target, the yield curve strategy seeks to find optimal exposures along the yield curve. We establish expected returns using scenario analysis that incorporates yield curve shifts, spread widening or tightening, and time horizon.
- **Quality** – The portfolio managers emphasize high quality, which is a central component of our fixed income philosophy and process.

The portfolio managers are responsible for investment decision-making, including asset allocation, security selection, portfolio construction, trading, and portfolio risk management. Since we place high value on independent thought, the portfolio managers are ultimately accountable for the strategy results and are not subordinate to an investment committee.

Corporate Credit and High Yield

We expect to achieve our return objective by investing in corporate bonds when we believe the market price discounts a greater risk of default or a greater loss upon default than is warranted. An additional source of return exists when the market price provides attractive compensation for short-term illiquidity or volatility, both of which are of less concern to a long-term investor. We manage our corporate bond strategies independent of a benchmark, and we will only take a meaningful position once we have completed a thorough analysis in comparison to price.

We are focused largely on the secondary corporate bond market and selectively on the primary (new issue) market. We expect to close the strategies before they become reliant on the new issue market. As a result, we are committed to maintaining an asset level that will allow us to always be nimble and selective.

Investment ideas are generated by the portfolio managers, as well as by the broader research team. The overlap between equity and fixed income research coverage is typically greater than 65%, illustrating the integration of the research process. We start with the investable universe of all U.S. dollar-denominated corporate bonds and then narrow that universe down through both qualitative and quantitative assessment. In addition to the analysis by the portfolio managers, we leverage the industry analysis conducted by our research team to identify attractive corporate bonds. Our company analysis focuses on the fundamental economic drivers of the business. We seek to invest in corporate bonds of companies with improving return on invested capital and stable or improving competitive positions. After the credit research is complete, the portfolio managers determine whether a security is attractive on a yield basis relative to asset and interest coverage and relative to other securities with comparable risk. Financial metrics are reviewed in comparison to other available credits. The expected return and yield are also considered in comparison to expected returns and relative value across companies, industries, and the capital structure.

The portfolio managers are responsible for investment decision-making, including asset allocation, security selection, portfolio construction, trading, and portfolio risk management. Since we place high value on independent thought, the portfolio managers are ultimately accountable for the strategy results and are not subordinate to an investment committee. The assistant portfolio manager provides significant analytical support and serves as a backup to the portfolio managers. If the portfolio managers are unavailable, the assistant portfolio manager has the authority to make investment decisions.

Securities are generally held until they mature or are called. Securities may be sold when the price reaches our estimate of intrinsic value, to raise proceeds for a more attractive opportunity, or if the underlying fundamentals deteriorate. We evaluate these opportunities from both an absolute and relative value perspective for a better risk/reward trade-off.

We define risk as the permanent loss of capital rather than short-term price volatility. We are, however, also focused on limiting longer-term downside volatility and drawdowns. Portfolio managers are ultimately accountable for managing risk in a portfolio. Our most important risk control flows from our rigorous credit analysis designed to avoid defaults and assess the appropriate compensation for the risks that we bear.

To limit downside risk and potential loss, we diversify portfolios by managing sector, industry and position weights according to the following guidelines:

- Securities of an individual corporate issuer cannot be more than 10% of the portfolio at market.
- Maximum exposure to any one industry is limited to 25% of the portfolio at market.

- Maximum exposure to any one sector is limited to 55% of the portfolio at market.

Fixed Income Strategies – Investment Risks

The material risks associated with our fixed income strategies are:

Fixed Income Market Risk – Fixed income securities increase or decrease in value based on changes in interest rates. If rates increase, the value of fixed income securities generally declines. On the other hand, if rates fall, the value of the fixed income securities generally increases.

Management Risk – Our judgments about the attractiveness, value, and potential appreciation of a particular asset class or individual security may be incorrect and there is no guarantee that individual securities will perform as anticipated. The value of an individual security can be more volatile than the market as a whole, and our intrinsic value approach may fail to produce the intended results.

Credit Risk – There is a risk that issuers and counterparties will not make payments on the securities they issue. In addition, the credit quality of securities may be lowered if an issuer's financial condition changes. Lower credit quality may lead to greater volatility in the price of a security which may affect liquidity and our ability to sell the security.

Inflation Risk – Because inflation reduces the purchasing power of income produced by existing fixed income securities, the prices at which fixed income securities trade will be reduced to compensate for the fact that the income they produce is worth less. This potential decrease in market value would be the measure of inflation risk.

High Yield Securities Risk – The strategies invest in fixed income securities rated below-investment grade, also known as high yield securities or junk bonds. High yield securities provide greater income and opportunity for gain, but entail greater risk of loss of principle. High yield securities are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligation. These investments may be issued by companies which are highly leveraged, less creditworthy or financially distressed. Although these securities provide a higher yield than higher-rated debt securities, the high degree of risk involved in these investments can result in substantial or total loss. The market for high yield securities is less active than the market for higher quality securities and the market price of these securities can change suddenly and unexpectedly. Based on measures such as dealer inventories and average trade size, the high yield market has become less liquid at the same time as it has grown markedly and become more concentrated under the control of the largest investors. During future periods of market stress, liquidity conditions in the high yield market may be even worse than prior periods of market stress.

Illiquid Securities Risk – The strategies may invest in illiquid securities. The price paid for the purchase of illiquid securities or received for the resale may be lower than the

price paid or received for similar securities with a more liquid market. In addition, there may be no market or a limited market in which to sell illiquid securities.

Sector Emphasis Risk – The Corporate Credit and High Yield strategies, from time to time, may invest up to 55% of its assets in a single sector subjecting the strategy to sector emphasis risk. This is the risk that the strategy is subject to a greater risk of loss as a result of adverse economic, business, or other developments affecting a specific sector the strategy has a focused position in, than if its investments were diversified across a greater number of industry sectors. Some sectors possess particular risks that may not affect other sectors.

Government Securities Risk – The Short Duration Total Return and Core Bond strategies may invest in securities issued or guaranteed by the U.S. government or its agencies and instrumentalities. These securities may be backed by the credit of the government as a whole or only by the issuing agency. U.S. Treasury bonds, notes, and bills and some agency securities, such as those issued by the Federal Housing Administration and Ginnie Mae, are backed by the full faith and credit of the U.S. government as to payment of principal and interest and are the highest quality government securities. Other securities issued by U.S. government agencies or instrumentalities, such as securities issued by the Federal Home Loan Banks and Freddie Mac, are supported only by the credit of the agency that issued them, and not by the U.S. government. Securities issued by the Federal Farm Credit System, the Federal Land Banks, and Fannie Mae are supported by the agency's right to borrow money from the U.S. Treasury under certain circumstances, but are not backed by the full faith and credit of the U.S. government. No assurance can be given that the U.S. government would provide financial support to its agencies and instrumentalities if not required to do so by law.

Asset-Backed, Mortgage-Related and Mortgage-Backed Securities Risk – The Short Duration Total Return and Core Bond strategies may invest in asset-backed, mortgage-related and mortgage-backed securities, including so-called “subprime” mortgages that are subject to certain other risks including prepayment and call risks. When mortgages and other obligations are prepaid and when securities are called, the fund may have to reinvest in securities with a lower yield or fail to recover additional amounts (i.e., premiums) paid for securities with higher interest rates, resulting in an unexpected capital loss and/or a decrease in the amount of dividends and yield. In periods of rising interest rates, the fund may be subject to extension risk, and may receive principal later than expected. As a result, in periods of rising interest rates, the fund may exhibit additional volatility. During periods of difficult or frozen credit markets, significant changes in interest rates, or deteriorating economic conditions, such securities may decline in value, face valuation difficulties, become more volatile and/or become illiquid.

Collateralized mortgage obligations (“CMOs”) and stripped mortgage-backed securities, including those structured as interest only (“IOs”) and principal only (“POs”), are more volatile and may be more sensitive to the rate of prepayments than other mortgage-related securities. CMOs are issued in multiple classes, and each class may have its own interest rate and/or final payment date. A class with an earlier final payment date may have certain preferences in receiving principal payments or earning interest. As a result, the value of some classes in which the fund invests may be more volatile and may be subject to higher risk of non-payment. The risk of default, as described under “Credit Risk”, for “sub-prime” mortgages is higher than other types of mortgage-backed securities. The structure of some of these securities may be complex and there may be less available information than other types of debt securities.

The values of IO and PO mortgage-backed securities are more volatile than other types of mortgage-related securities. They are very sensitive not only to changes in interest rates, but also to the rate of prepayments. A rapid or unexpected increase in prepayments can significantly depress the price of interest only securities, while a rapid or unexpected decrease could have the same effect on principal-only securities. In addition, because there may be a drop in trading volume, an inability to find a ready buyer, or the imposition of legal restrictions on the resale of securities, these instruments may be illiquid. The fund will be exposed to additional risk to the extent that it uses inverse floaters and inverse IOs, which are debt securities with interest rates that reset in the opposite direction from the market rate to which the security is indexed. These securities are more volatile and more sensitive to interest rate changes than other types of debt securities. If interest rates move in a manner not anticipated by the Adviser, the fund could lose all or substantially all of its investment in inverse IOs.

Prepayment Risk – The Short Duration Total Return and Core Bond strategies may invest in securities where the issuer may repay principal in advance, especially when yields fall. Changes in the rate at which prepayments occur can affect the return on investment of these securities. When debt obligations are prepaid or when securities are called, the Fund may have to reinvest in securities with a lower yield. The fund also may fail to recover additional amounts (i.e., premiums) paid for securities with higher coupons, resulting in an unexpected capital loss.

Foreign and Emerging Markets Risk – The fixed income strategies may invest in foreign securities and U.S. securities of companies domiciled in foreign countries that may experience more rapid and extreme changes in value than securities of U.S. companies. These companies may be subject to additional risks, including political and economic risks, civil conflicts and war, greater volatility, expropriation and nationalization risks, currency fluctuations, higher transaction costs, delayed settlement, possible foreign controls on investments, and less stringent investor protection and

disclosure standards of foreign markets. These risks are magnified in emerging markets as events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable becoming riskier and more volatile.

Other Risks

All investing involves risks, including the permanent loss of capital. Diamond Hill does not guarantee the future performance of a client's account, the success of any investment decision or strategy, or the success of the overall management of an account. Laws and regulations affecting the management of client accounts change from time to time, and we are currently operating in an environment of significant regulatory reform. We cannot predict the effects, if any, of future legal and regulatory changes on our business or the services we provide.

In addition to the risks described above that primarily relate to the value of investments, there are various operational and systems risks involved in investing, including but not limited to "cybersecurity" risk. As the use of technology and frequency of cyber-attacks on financial services targets has become more prevalent, Diamond Hill and the client accounts we manage have become potentially more susceptible to operational risks through breaches in cybersecurity. A breach in cybersecurity refers to both intentional and unintentional events that may cause Diamond Hill to lose proprietary information, suffer data corruption, or lose operational capacity. This in turn could cause Diamond Hill and/or a client account to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures, and/or financial loss. A cybersecurity breach may also result in a third party obtaining unauthorized access to Diamond Hill clients' information, including social security numbers, home addresses, account numbers, account balances, and account holdings. Cybersecurity breaches may involve unauthorized access to digital information systems (e.g., through "hacking" or malicious software coding), and may also result from outside attacks such as denial-of-service attacks (i.e., efforts to make network services unavailable to intended users). In addition, cybersecurity breaches of third-party service providers (e.g., a client's custodian) or issuers of securities in which an account invests can subject an account to many of the same risks associated with direct cybersecurity breaches. Although Diamond Hill has established risk management systems designed to reduce the risks associated with cybersecurity threats, there is no guarantee that such efforts will succeed, especially since Diamond Hill does not directly control the cybersecurity systems of issuers or third-party service providers.

Item 9. Disciplinary History

Registered investment advisers are required to disclose all material facts regarding any legal or disciplinary events that would be material to your evaluation of the firm or the integrity of the firm's management in this item. Registered investment advisers are required to report all disciplinary events regardless of whether they are material in Part 1A of Form ADV. Diamond Hill has no legal or disciplinary events of any kind to report.

Item 10. Other Financial Industry Activities & Affiliations

As noted in Item 4, Diamond Hill is a wholly owned subsidiary of Diamond Hill Investment Group, Inc.

Certain employees hold FINRA licenses and are registered representatives of Foreside Financial Services, LLC, an unaffiliated limited purpose broker/dealer that provides statutory underwriting services to mutual fund companies, including Diamond Hill Funds. Neither Diamond Hill nor any of its employees receive any compensation from Foreside Financial Services, LLC.

MUTUAL FUNDS

Diamond Hill serves as the investment adviser and administrator to the Diamond Hill Funds, an open-end registered investment company. Certain persons listed in Schedule A of Diamond Hill's Part 1A of Form ADV are Officers of the Diamond Hill Funds. As Officers, these persons are involved in the day-to-day management of the Diamond Hill Funds. In order to avoid any potential conflicts of interests, these persons are subject to Diamond Hill's Code of Ethics and are supervised by an independent Board of Trustees.

In addition, the Board of Trustees of the Diamond Hill Funds supervises the advisory services and the administrative services agreements between Diamond Hill and the Diamond Hill Funds.

Diamond Hill does not believe these services create material conflicts of interest between Diamond Hill and its other clients.

Diamond Hill also serves as a sub-adviser to other mutual funds.

PRIVATE INVESTMENT FUNDS

Diamond Hill is also the Managing Member of Diamond Hill General Partner, LLC. Diamond Hill General Partner, LLC is the general partner of Diamond Hill Investment Partners, L.P. and Diamond Hill International Equity Fund, L.P. Collectively, these funds

are referred to as “private investment funds.”³ (Item 6 provides more information relating to the private investment funds.).

SOLICITOR FEES

Diamond Hill may enter into an agreement with a broker-dealer or registered investment adviser in which Diamond Hill pays a set percentage of its management fee and/or performance-based fee to the referring broker-dealer or registered investment adviser. These arrangements, often referred to as Solicitor’s Agreements, are more specifically discussed in Item 14.

³ Private investment funds are often referred to as hedge funds and are only offered on a private placement basis to accredited or qualified investors. As discussed in Items 5 and 6, Diamond Hill could earn either a management fee or both a management fee and a performance-based incentive fee on the private investment funds.

Item 11: Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

CODE OF ETHICS & PERSONAL TRADING

Diamond Hill has adopted a Code of Ethics for all employees of the firm describing our high standards of business conduct, fiduciary duty to our clients, and rules surrounding personal securities trading by our employees. A copy of the Code of Ethics is available to clients and prospective clients upon request.

The Code of Ethics prohibits employees from purchasing individual securities that are also eligible to be held in one of our funds or client portfolios and from purchasing non-Diamond Hill Funds that invest primarily in U.S. equity or taxable bond securities. As a result of these prohibitions, substantially all of our employees' U.S. equity and taxable bond investments are in the Diamond Hill Funds.⁴

The Code of Ethics also includes guidelines related to the reporting of personal securities holdings and trading activity. All Diamond Hill employees must accept the terms of the Code of Ethics upon employment, annually, or as amended.

From time to time, Diamond Hill employees receive gifts and/or entertainment in connection with their employment at Diamond Hill. To reduce the potential for conflict between an employee's personal interests and the interests of Diamond Hill clients, Diamond Hill has adopted a gifts and entertainment policy in its Code of Ethics based on the principle that employees should not accept or solicit anything of value that is intended or designed to cause, or would reasonably be judged to have the likely effect of causing, such employee to act in a manner that is inconsistent with the best interest of Diamond Hill clients. Under the policy, any employee who receives a gift of more than a nominal value (as defined in the Code) in connection with the employee's employment at Diamond Hill is not permitted to retain the gift. The policy also prohibits an employee from accepting any extravagant or excessive business entertainment from organizations with which Diamond Hill does business.

In addition, the Code of Ethics restricts outside business activities that may create conflicts of interest.

PARTICIPATION IN CLIENT TRANSACTIONS

Diamond Hill recommends to its clients the purchase or sale of our private investment funds. (Item 10 provides a discussion of our private investment funds.). Diamond Hill could earn a management fee or both a management fee and a performance-based fee on the private investment funds. (Items 5 and 6 provide more information about these fees.).

⁴ Excluding investments in Diamond Hill Investment Group, Inc. Certain policy exceptions exist, primarily related to investments within 401k plans and other participant directed retirement plans.

Diamond Hill recommends to its clients the purchase or sale of Diamond Hill Funds. Diamond Hill serves as the investment adviser and administrator for and receives fees from the Diamond Hill Funds.

Therefore, potential conflicts of interest exist. To avoid the duplication of fees and the potential for conflicts of interest, we do not charge a separate advisory fee to clients on their assets which are invested in the private investment funds or Diamond Hill Funds.

A portion of Diamond Hill's corporate investment portfolio is invested in mutual funds or in private investment funds for which Diamond Hill serves as investment adviser, administrator, general partner, or manager. Employees also own interests in the private investment funds and Diamond Hill Funds. We do not believe that these investments cause a conflict of interest between Diamond Hill and its advisory clients due to the pooled nature of the investments. Diamond Hill does not invest its corporate investment portfolio in any individual securities which are eligible to be held in one of our funds or client portfolios.

POLITICAL CONTRIBUTIONS

It is Diamond Hill's policy to not make, and to prohibit its employees from making on behalf of Diamond Hill, any political contributions for the purpose of influencing an existing or potential client, a public official or his or her agency. However, employees may make personal political contributions in accordance with the requirements and restrictions of applicable law and Diamond Hill's policies. To help ensure compliance with SEC rules, and many state and local pay-to play rules, Diamond Hill employees must pre-clear and obtain prior approval from the compliance department before they make any contributions (i.e. any monetary contribution or contribution of goods or services) to a political candidate, government official, political party or political action committee.

TRADE ERRORS

There are two potential types of trade errors: those that are detected after the trade has settled and those that are detected prior to trade settlement. Diamond Hill corrects all their trade errors so that the client does not suffer a loss and is not harmed.

Trade errors that are detected after the trade has settled in a client account are considered "Client Account Trade Errors." For Client Account Trade Errors where Diamond Hill is determined to be at fault, Diamond Hill will reimburse the client for any losses resulting from the error. If it is determined that the client is at fault, Diamond Hill may, in its discretion, pay the loss or charge the loss (in whole or in part) to the client. Net gains incurred when correcting a Client Account Trade Error will be retained by the client.

Trade errors that are detected prior to settlement in a client account are considered "Adviser Account Trade Errors." Diamond Hill will settle Adviser Account Trade Errors, and any correcting trade, into a separate error account. Net gains realized on a correcting

trade will be retained by Diamond Hill and net losses incurred on a correcting trade will be paid by Diamond Hill. Net gains are retained in the error account and used to offset future net losses within a calendar year. If Diamond Hill has cumulative net gains at the end of any calendar year, it shall donate those net gains to charity.

Item 12: Brokerage Practices

BROKER SELECTION & BEST EXECUTION

In most arrangements, Diamond Hill has the authority to make all determinations as to securities to be bought and sold, the amounts of the securities bought or sold, the broker-dealer to be used, and commissions and other fees to be paid. As part of its discretionary responsibilities in executing trades on behalf of clients, Diamond Hill seeks best execution under the circumstances of each trade. Clients may, in limited circumstances, request or select their own broker-dealers subject to Diamond Hill's directed brokerage policy described below.

When selecting broker-dealers to execute transactions, Diamond Hill takes into consideration the range and quality of a broker's services including, but not limited to, execution capability, trading expertise, accuracy of execution, commission rates, research, reputation and integrity, fairness in resolving disputes, financial responsibility, and responsiveness. The determinative factor is not the lowest possible commission cost, but whether the transaction represents best qualitative execution under the circumstances. The evaluation of the reasonableness of the brokerage commissions paid in connection with portfolio transactions is based on the professional opinions and judgments of the persons responsible for the placement and review of such transactions. These opinions are formed on the basis of, among other things, the experience of these individuals in the securities industry and information available to them, including industry survey data concerning the level of commissions being paid by other investors of comparable size and type.

Diamond Hill has a Best Execution Committee that has oversight and policy-making responsibility for Diamond Hill's brokerage practices. The Best Execution Committee includes representatives from senior management, trading, compliance, and investments. The Best Execution Committee meets periodically, typically quarterly.

Diamond Hill's equity traders use various trade execution management systems to ensure proper trade management, including fair order allocation and to seek best execution. Diamond Hill may also place orders to buy and sell equity securities where the broker is acting on a principal rather than agency basis, if Diamond Hill's traders believe that trading on a principal basis is likely to provide best execution. The fixed income portfolio

managers typically execute their own trades with approved brokers who provide closely monitored inventories of fixed income securities on a regular basis.

We have controls in place for monitoring execution in our clients' portfolio transactions, including reviewing trades for best execution. Certain broker-dealers that Diamond Hill uses to execute client trades are also clients of Diamond Hill and/or refer clients to Diamond Hill creating a conflict of interest. To mitigate this conflict we adopted a policy that prohibits us from considering any factor other than best execution when a client trade is placed with a broker-dealer.

EXECUTION PRACTICES FOR LEGACY SECURITIES

Diamond Hill reserves the right to establish policies that limit acceptance of a client's previously acquired securities ("legacy" positions or securities) for account funding or contribution purposes. Where accepted, Diamond Hill evaluates legacy positions and will sell all or a portion of such securities to the extent that such securities would not be included in Diamond Hill's model portfolio holdings for such account (unless such securities are subject to another express arrangement). Depending on the size and characteristics of the legacy position and the then-prevailing markets and other factors, the client may receive a sale price that is less favorable than if the transaction involved a more marketable or liquid position. The client will be responsible for all tax liabilities that result from any sale transactions.

In connection with establishing a new account or account mandate for a separate account, Diamond Hill will work with the client to identify legacy securities that might appropriately be held by the account.

EXECUTION PRACTICES FOR THE TERMINATION OF ACCOUNTS

Clients who terminate accounts may retain securities in their account or instruct Diamond Hill to sell the portfolio securities. When following termination and liquidation instructions, as a result of time constraints and lot sizes that may be applicable to these types of sale transactions and the general unavailability of the full range of trading techniques including aggregation, the prices received in these transactions may be less favorable than the prices that could be attained for sales of securities selected by Diamond Hill as part of ongoing management.

RESEARCH AND BROKERAGE BENEFITS

In allocating brokerage, Diamond Hill may take into consideration the receipt of research and brokerage services, consistent with its obligation to seek best execution for client transactions. As permitted by Section 28(e) of the Securities Exchange Act of 1934, as amended (“Section 28(e)”), Diamond Hill may cause its clients to pay a broker that provides “brokerage and research services” (as defined by Section 28(e)) to Diamond Hill an amount of commission for effecting a securities transaction for clients in excess of the amount other brokers would have charged for the transaction if Diamond Hill determines in good faith that the greater commission is reasonable in relation to the value of the brokerage and research services provided by the executing broker viewed in terms of either a particular transaction or Diamond Hill’s overall responsibility to the client and its other clients. The broker may directly provide brokerage and research services to Diamond Hill, or may purchase them from a third party for Diamond Hill. When Diamond Hill uses commissions to receive brokerage and research services, Diamond Hill receives a benefit because it does not have to produce or pay for the research, products, or services.

The term “brokerage and research services” includes advice as to the value of securities; the advisability of investing in, purchasing or selling securities, and the availability of securities or purchasers or sellers of securities furnishing analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy and the performance of accounts; and effecting securities transactions and performing functions incidental thereto (such as clearance and settlement) or required in connection therewith by applicable rules.

Diamond Hill has acquired the following types of brokerage and research services with client commissions (collectively, “Research”):

- Reports or databases containing corporate, fundamental, industry, economic or statistical analyses;
- Industry conferences;
- Access to analysts and corporate management;
- Trading analytics; and
- Research field trips to visit corporate management and/or tour company facilities.

Diamond Hill has entered into client commission agreements with broker/dealers that are involved from time to time in executing, clearing, or settling securities transactions on behalf of clients (“CCA Brokers”), which provide for the CCA Brokers to pay a portion of the commissions paid by Diamond Hill’s clients for securities transactions (“CCA Commissions”) to providers of research services.

Because these research service providers play no role in executing client securities transactions, any research prepared by that research service provider typically constitutes third-party research. Diamond Hill may use brokerage commissions, including CCA Commissions, from client portfolio transactions to acquire Research, subject to the procedures and limitations provided in this discussion.

From time to time, Diamond Hill prepares a list of providers of research services that have been deemed by Diamond Hill to provide valuable research (“Research Firms”) as determined by Diamond Hill’s investment staff. CCA Brokers are eligible to be included in the list of Research Firms. All trades with Research Firms will be affected in accordance with Diamond Hill’s obligation to seek best execution for its client accounts. Diamond Hill uses a vote by its investment staff as a guide for allocating CCA Commissions. Compensation for research may also be made pursuant to commissions paid on trades executed by a Research Firm who is registered as a broker/dealer (“Research Broker”). Under normal circumstances, CCA Brokers are compensated for research solely through trade commissions. To the extent that payments for research to a Research Broker other than a CCA Broker are made pursuant to trade commissions, Diamond Hill will reduce the amount of CCA Commissions to be paid to that Research Broker for its research. However, Diamond Hill will reduce the amount of CCA Commissions to be paid to that Research Broker by less than the full amount of trade commissions paid to that Research Broker. Neither Diamond Hill nor any client has an obligation to any Research Firm if the amount of trade commissions and CCA Commissions paid to the Research Firm is less than the applicable non-binding target. Diamond Hill reserves the right to pay cash to a Research Firm from its own resources in an amount the Adviser determines in its discretion.

The products and services acquired by Diamond Hill in connection with such arrangements are intended to comply with Section 28(e) and the SEC’s related interpretive guidance. Diamond Hill will not cause its clients to use trade commissions or CCA Commissions for purposes other than for eligible brokerage and research services.

Clients desiring to prohibit Diamond Hill from generating CCA Commissions on transactions in their accounts should consider that they will generally pay the same commission rates as accounts that are not prohibited from generating CCA Commissions.

In determining whether a service or product qualifies as brokerage and research services under Section 28(e), Diamond Hill evaluates whether the service or product provides lawful and appropriate assistance to Diamond Hill in carrying out its investment decision making responsibilities. The determination and evaluation of the reasonableness of the brokerage commissions paid is based primarily on the professional opinions of the investment professionals who utilize the Research.

Research received from broker-dealers is supplemental to Diamond Hill's own research efforts. As a practical matter, in some cases Diamond Hill could not, on its own, generate all of the research that broker-dealers provide without materially increasing expenses. The management fee paid by Diamond Hill's clients is not reduced as a consequence of Diamond Hill's receipt of Research. To the extent the clients' portfolio transactions are used to obtain Research, the brokerage commissions paid by the clients might exceed those that might otherwise be paid for execution only. The brokerage and research services furnished by broker-dealers is useful and of value to Diamond Hill in servicing any or all of Diamond Hill's clients and may not necessarily be used by Diamond Hill in connection with the accounts that actually paid commissions, nor in proportion to the amount of commissions paid by accounts, to the broker-dealer providing the services.

Receipt of Research from brokers who execute client trades involves conflicts of interest. Since Diamond Hill uses client brokerage commissions to obtain Research, it receives a benefit because it does not have to produce or pay for the research, products, or services itself. Consequently, Diamond Hill has an incentive to select or recommend a broker based on its desire to receive research, products, or services rather than a desire to obtain the most favorable execution. Diamond Hill attempts to mitigate these potential conflicts through oversight of the use of commissions by its Best Execution Committee.

DIRECTED BROKERAGE & AGGREGATED TRADES

Although we discourage clients from directing trades to a particular broker-dealer (directed brokerage), we do have clients who request directed trades. Diamond Hill's accommodation of directed brokerage creates a conflict (between those clients who have given Diamond Hill full discretion and those who have directed trading through a specific broker) related to the ordering of trade execution and potential market impact. Diamond Hill's policy is to execute transactions for directed brokerage accounts following the execution of portfolio transactions in other client accounts where Diamond Hill has full discretion to execute trades. Diamond Hill may also place the trade with an executing broker on our approved list and "step out" the trade to the directed broker. In this case, the directed brokerage client may incur additional charges or pay extra commissions. Clients who request or require directed trades may pay higher brokerage commissions because we may not be able to aggregate orders to reduce transaction costs, and may also receive less favorable prices and execution.

Diamond Hill has a trade allocation policy that allows it to select brokers for accounts where the client has given us full discretion. Trades in discretionary accounts are grouped together and traded first. Directed brokerage accounts, in which the client has requested us to use a specific broker or group of brokers or has an arrangement with a broker, such as the sponsor of a wrap program, which makes it cost prohibitive to trade with any other broker, are grouped together and placed in random order by broker. (Item 4 provides more details about Wrap Fee Programs). Directed brokerage account trades are executed

after all discretionary trades in the same security have been completed. As a result, the price of a particular security may move away from the desired execution price prior to completing all directed brokerage account trades, which may cause directed brokerage accounts to not receive the same portfolio weighting in a security as other client accounts where Diamond Hill has full discretion to execute trades. When a trade is partially completed, the shares are allocated on a pro-rata basis to the appropriate client accounts. All grouped trades are allocated to the participating accounts at average cost.

The more client assets we manage and directed brokerage relationships we accommodate, the greater the potential market impact cost will be to client portfolios. Market impact cost is a measure of market liquidity that reflects the non-explicit transaction costs incurred in the execution of portfolio transactions. These costs are mitigated by several things including, but not limited to, the resources the firm receives for the management of these assets and the deployment of such resources to attract and retain the employees to manage the assets.

SERVICES FOR OTHER CLIENTS

Diamond Hill may give advice and take action for itself or clients, including registered investment companies and other pooled investment vehicles, which differs from advice given to, or the timing or nature of action taken for, other clients. Specific asset allocations within client accounts may differ from those in other accounts managed by Diamond Hill due to various factors including, but not limited to, the availability of certain investments, market conditions, or the amount of client funds available for investment or reinvestment. Diamond Hill is not obligated to initiate any transactions for clients in any security that Diamond Hill may purchase or sell for its own accounts or the accounts of any other client.

Diamond Hill provides its strategy model portfolio to sponsors of UMA programs on a periodic basis (see Item 4). In these cases, the program sponsor has investment discretion and is responsible for execution of client transactions. Diamond Hill is not aware of when the program sponsor executes transactions as a result of the model provided to it by Diamond Hill. As a result, both Diamond Hill and the program sponsors may be executing trades in the same security at the same time. Therefore, Diamond Hill's provision of model portfolios to UMA programs creates a potential conflict because Diamond Hill clients and clients of the UMA sponsor may be competing to purchase the same securities.

Item 13: Review of Accounts

Diamond Hill reviews client accounts on a regular basis. Equity portfolio managers perform a periodic review of each client account during which every position is compared to the model weights for the respective investment strategy. Fixed Income portfolio managers perform a periodic review of each client account to ensure the account is properly positioned relative to client objectives and restrictions. Client accounts are also monitored by our compliance department daily for consistency with client objectives and restrictions.

Diamond Hill generally provides periodic written reports to its separate account clients. These written reports may contain a transaction statement, appraisal of portfolio holdings, investment results, and/or other statistical data related to the client's account.

Wrap fee clients and clients in other similar programs receive reports directly from program sponsors, not from Diamond Hill.

Item 14: Client Referrals and Other Compensation

Other than the compensation described in Items 5 and 6, Diamond Hill does not receive an economic benefit from anyone other than its clients. (Item 10 provides more information about these relationships.)

Diamond Hill may enter into agreements with broker-dealers or investment advisers that are referred to as Solicitor's Agreements. Diamond Hill pays a percentage of the management fee and/or performance-based fee collected from the client to a referring broker-dealer or investment adviser. Clients under these agreements will not be charged fees higher than the standard fees described in Item 5. (Item 5 provides a discussion of our fees and compensation structures.). Diamond Hill currently has a Solicitor Agreement with Stifel, Nicolaus & Company, Incorporated.

Item 15: Custody

Diamond Hill separate account clients select their own custodians to hold the cash and securities in their accounts. A client custodian may be a broker-dealer, bank, or other financial institution that satisfies the SEC's definition of "qualified custodian." Diamond Hill is not a qualified custodian and does not provide custody services. Clients will receive statements directly from the qualified custodians at least quarterly. We urge clients to carefully review those statements and compare the custodial records to the reports that we provide them. The information in our reports may vary from custodial statements

based on accounting procedures, reporting dates, or valuation methodologies of certain securities.

Diamond Hill is deemed to have custody of certain private investment funds for which it serves as managing member or general partner. Investors in such private investment funds will receive the fund's annual audited financial statements within 120 days of the fund's fiscal year-end. Such investors should review these statements carefully. If investors in the private funds do not receive audited financial statements in a timely manner, they should contact Diamond Hill immediately.

Item 16: Investment Discretion

All clients enter into a written investment management agreement with Diamond Hill prior to receiving investment management services. These agreements give us authority to manage the client's account and place trades, subject to the investment objectives and guidelines for the account.

Diamond Hill usually receives and accepts discretionary authority to manage the assets in each client's account. We adhere to the investment limitations and restrictions that are outlined in each account's investment management agreement.

Item 17: Voting Client Securities

We will allow clients to vote the proxies in their account; however, Diamond Hill typically accepts authority to vote proxies for our clients' accounts. For those clients that retain the ability to vote proxies themselves, clients will not receive information about their proxies from Diamond Hill. Instead, clients should receive proxies from their custodian, transfer agent, or other third-party service provider such as their proxy service provider. For those clients that direct Diamond Hill to vote proxies on their behalf, Diamond Hill has established a formal written proxy voting policy and procedures that are designed to ensure that proxies are voted in a manner to maximize the value of the securities held in our clients' accounts. We will pay particular attention to the following matters in exercising our proxy voting responsibilities for our clients:

Accountability. Each company should have effective controls in place to hold those entrusted with managing a company's business accountable for their actions. Company management should be accountable to its board of directors and the board should be accountable to shareholders.

Alignment of Management and Shareholder Interests. Each company should seek to align the interests of management and the board of directors with the interests of

the company's shareholders. For example, we believe that compensation should be designed to reward management for creating value for the shareholders of the company.

Transparency. Each company should provide timely disclosure of important information about its business operations and financial performance to enable investors to evaluate the company's performance and to make informed decisions about the purchase and sale of the company's securities. When we recognize a conflict of interest that impedes our ability to vote a proxy, we will deliver the proxy to the client to be voted. We do not utilize third-party proxy voting services. If a client wishes to direct Diamond Hill to vote in a certain manner for a particular proxy, they should provide such direction in writing to Diamond Hill at least two weeks prior to the shareholder meeting date. A copy of our proxy voting policies and procedures and/or information regarding the votes cast by Diamond Hill with regard to a client's securities is available upon request mailed to:

Diamond Hill Capital Management, Inc.
Attn: Proxy Voting Requests
325 John H. McConnell Blvd., Suite 200
Columbus, Ohio 43215

Item 18. Financial Information

In certain circumstances, registered investment advisers are required to provide you with financial information or disclosures about their financial condition in this Item. Diamond Hill has no financial commitment that impairs its ability to meet contractual and fiduciary commitments to clients and has never been the subject of a bankruptcy proceeding. Diamond Hill Investment Group, Inc. files quarterly and annual financial statements with the SEC. These are available through the SEC and on our web site at the following location:

<http://ir.diamond-hill.com>

Voluntary Disclosure of Personal Investments

Alignment of interests with those of our clients is a foundational value of Diamond Hill. One way we align our interests with those of our clients is through significant personal investment in our strategies. To foster this alignment of interests further, our Code of Ethics prohibits employees from purchasing individual equity or most taxable fixed income securities, minimizing conflicts of interest. The Code of Ethics also prohibits the purchase of third-party mutual funds that invest primarily in U.S. equity, taxable fixed income securities, or are in the Morningstar World Large Stock category. Third-party mutual funds can only be purchased in strategies not managed by Diamond Hill (e.g. municipal bond funds). As a result, substantially all employees' equity and taxable bond investments are in the same Diamond Hill managed strategies in which our clients invest. The tables below represent the dollar range of investments owned by portfolio managers, research analysts, and officers as of December 31, 2018. These tables include shares beneficially owned through Diamond Hill's 401(k) Plan and deferred compensation plans.

Strategy	Portfolio Manager	DOLLAR RANGE OF INVESTMENTS					
		\$1 - \$10,000	\$10,001 - \$50,000	\$50,001 - \$100,000	\$100,001 - \$500,000	\$500,001 - \$1,000,000	Over - \$1,000,000
